1. Introduction

1.1 Purpose

This document defines the functional and non-functional software requirements for the Human Resource Management System (HRM, System 09) of the Council for Legal Education and Training (CLET). It specifies, in detail, the capabilities the HRM system must provide across the full employment lifecycle for CLET staff, Board members, NBEC members, Tribunal members, inspectors, and engaged consultants. Includes recruitment, onboarding, contract management, payroll integration, performance management, leave management and exit procedures. Covers both civil service and Board/committee appointment tracks to support CLET's statutory and operational HR functions.

1.2 Scope

In scope:

- Core employee records, organisational structure and organisational chart management
- Recruitment, applicant pipeline, interview scheduling/scoring, and verification
- Secondment lifecycle management
- Internal promotion and internal transfer workflows
- Leave management: policy configuration, entitlement computation, leave types, day-tracking, training-clash detection, HoD approval, and organisational leave calendar
- Overtime claim submission, confirmation, and pay calculation
- Attendance tracking via biometric, card and mobile devices
- Payroll computation with statutory deductions (SSNIT, PAYE)
- Performance appraisal with goal-setting, progress tracking, and multi-window review cycles
- Compensation and salary band management
- Continuous Professional Development (CPD) pathways and training management
- Onboarding and offboarding/clearance
- Employee dependant management
- Job history and educational qualifications tracking
- Health and medical records management
- Employee welfare and support requests
- Grievance, disciplinary case management, and anonymous speak-up channel
- Workforce analytics, engagement surveys, and Board reporting
- Pre-defined and customised reporting
- Internal communications, pre-login staff portal, and policy repository
- Employee self-service portal
- Identity synchronisation with the IAM system
- Reward and recognition

Out of scope:

- User account creation, login, logout, MFA enrolment, change-password, and forgotten-password functions — provided entirely by the Identity and Access Management (IAM) System; the HRM system synchronises identity via SCIM only

1.3 Intended Audience

This document is intended for the CLET Directorate of Technology and Innovation (DTI), HR leadership (Director General, Registrar, Head of HR Directorate, HR Officers), the implementing development team, Quality Assurance, and Resource for Development (RfD) as the document author. It assumes the reader has a working understanding of CLET's organisational structure and the Legal Education Act, 2026.

1.4 Definitions, Acronyms and Abbreviations

Term	Definition
CLET	Council for Legal Education and Training
HRM	Human Resource Management System (System 09)
IAM	Identity and Access Management System — provides login, MFA, password management
SCIM	System for Cross-domain Identity Management — protocol used to synchronise identity with the IAM system
ESS	Employee Self-Service (portal)
HoD	Head of Directorate — the senior officer in charge of a CLET Directorate; first-stage approver for leave and overtime requests within their directorate
DG	Director-General
SSNIT	Social Security and National Insurance Trust
PAYE	Pay As You Earn (income tax)
GRA	Ghana Revenue Authority
CAGD	Controller and Accountant-General's Department
CPD	Continuing Professional Development
OKR	Objectives and Key Results
DEI	Diversity, Equity and Inclusion
eNPS	Employee Net Promoter Score
NBEC	National Bar Examination Committee — established under §65 of Act 1170
Tribunal	Legal Education Appeals Tribunal — established under §79 of Act 1170
S011	Governance Portal — Board and NBEC appointment management system
S013	Financial Management System
S020	Payment System — allowances and consultant fee disbursement
S022	Audit & Logging System

Term	Definition
PTK	Personnel Tracks module (SRS-HRM-PTK) — covers Board, NBEC, Tribunal, DG, Registrar, and Consultant personnel tracks
RLS	Row-Level Security (database access control)
S016	Unified Portal (formerly System 18)
S192	C&A Investigation Case Management System

1.5 References

See the References table on the document's front matter (REF-001 through REF-009).

1.6 Revision History

See the Revision History table on the document's front matter.

2. Overall Description

2.1 Product Perspective

The HRM system (System 09) is a standardised, modular Human Resource Management platform serving as the single source of truth for all CLET employee data. It integrates with the IAM System for identity/authentication, the Unified Portal (S016) for publishing applicable static content, the Cybersecurity, Audit & Logging Systems (CALS), Governance Portal for Board and Committee members, Tribunal system for membership definition, and the central Payment System for payroll disbursement. All employee-facing interactions outside of authentication are delivered through a single Employee Self-Service (ESS) portal layered over the platform's modules.

2.2 Product Functions — Overview

The HRM system provides, at a high level: Core HR and organisational structure management; Recruitment and onboarding; Internal mobility (promotion, transfer, secondment); Leave, attendance, and overtime management; Payroll; Performance management; Compensation; Learning and development; Offboarding; Compliance (grievance, disciplinary, speak-up); Health, welfare and dependant management; Analytics and reporting; Internal communications; and a unifying Employee Self-Service portal.

2.3 User Classes and Characteristics

The primary user classes are:

Role	Description
Employee	All CLET staff; uses the ESS portal for self-service across leave, payslips, goals, CPD, onboarding, dependants, qualifications, welfare, and communications.
Line Manager / HOD	Approves leave (first stage), confirms overtime, endorses promotions/transfers, conducts performance reviews for direct reports, views team leave calendar.
HR Officer	Manages employee records, recruitment pipeline, secondments, CPD assignment, onboarding/offboarding checklists, dependant and qualification verification, welfare requests.
HR Manager	Oversees HR Officers; manages organisation-wide analytics, engagement surveys, workforce planning and leave policy; manages grievance cases, disciplinary cases, and Speak-Up report triage, with authority to delegate individual cases to designated HR Officers.
Payroll Officer	Computes payroll runs; restricted from approving the same run (segregation of duties) and from compliance data.
Director-General	Presidential appointee (\$11); ex-officio Board member; manages the Council's day-to-day administration; receives Board HR Pack; approves consultant deliverables .
Board Member	Appointed by the President (\$4, \$6); accesses the Governance Portal (S011) for governance functions; receives meeting allowances via Payment System (S020); term and tenure tracked in HRM.

Role	Description
NBEC Member	Appointed by Chief Justice/Bar/Conference (§65, §67); accesses the NBEC system for examination administration functions; receives allowances; term and tenure tracked in HRM
Tribunal Member	Appointed by the Board per appeal (§80); ad hoc; accesses the Tribunal system for the duration of a sitting; receives allowances; tracked per constitution in HRM.
Consultant / Adviser	Engaged on Board recommendation under §15(3); deliverables tracked in HRM; paid only on DG-confirmed delivery; limited-access IAM account provisioned for engagement duration.
System Administrator	Configures SCIM/IAM integration, webhook subscriptions, leave policy parameters, overtime multipliers, and platform-wide standards.
Applicant (external)	Submits job applications via the self-service applicant portal; not a CLET employee.

2.4 Status Matrix

No	Action	Employee/Applicant Status (What they see)	Interpretation of Status	CLET (Internal Staff) Status (What staff see)	Manual State Change (Yes/No)
1	Application submitted	Submitted	Application received, awaiting screening	Submitted	No
2	Application screened	Under Review	HR reviewing eligibility	Under Review	No
3	Candidate shortlisted	Shortlisted / Unsuccessful	Selected for interview stage	Shortlisted / Unsuccessful	No
4	Interview scheduled/conducted	Interview	Panel assessment in progress	Interview / Scored	No
5	Offer extended, acceptance triggered	Offer / Unsuccessful	Pass / Fail	Offer / Acceptance	No
6	Offer accepted, verification triggered	Offer Accepted / Rejected	Background/credential checks running	Acceptance / Verifying	No
7	Hire converted	Hired	Applicant converted to employee, onboarding triggered	Active — Onboarding	No
8	Leave submitted	Pending HOD	Awaiting HOD Approval / Rejection	Pending HOD Approval	No
9	Leave Cancelled	Cancelled	Employee Cancelled leave	Cancelled	No

No	Action	Employee/Applicant Status (What they see)	Interpretation of Status	CLET (Internal Staff) Status (What staff see)	Manual State Change (Yes/No)
10	Leave HOD-approved	HOD Approved, Pending HR	Awaiting HR final approval	Pending HR Approval	No
11	Leave HR-approved	Approved	Leave confirmed, balance updated	Approved	No
12	Promotion case approved & effected	—	Grade/position/salary updated	Active — Promoted	No
13	Termination/resignation recorded	—	Offboarding in progress	Offboarding — Clearance Pending	No
14	Clearance complete, last day reached	—	All accounts revoked	Alumni	No

2.5 Operating Environment

The HRM system is a web-based platform accessible via standard modern browsers, backed by a database with row-level security enabled on sensitive tables. It exchanges data with the IAM System via SCIM 2.0, with other CLET systems via signed webhooks and authenticated REST APIs, and with biometric/card-reader/mobile devices via HTTP POST.

2.6 Design and Implementation Constraints

- The HRM system must not implement user authentication, MFA, login, logout, change-password, or forgotten-password functions. These are delegated entirely to the IAM System.
- All policy-driven values (leave entitlements, SSNIT/PAYE rates, overtime multipliers, CPD hour requirements, salary bands) must be managed dynamically via the system.
- Segregation of duties must be system-enforced for payroll computation and approval.
- All modules must reuse the shared employee identity, audit-logging mechanism, and notification-delivery.

2.7 Assumptions and Dependencies

Assumptions:

- The IAM System (Keycloak-based) is available and exposes a SCIM 2.0-compatible endpoint before HRM go-live.
- CLET's organisational structure (directorates, grades, salary bands) is finalised and available for initial data load.
- Biometric/card-reader devices (ZKTeco, Suprema) are procured and network-accessible to the HRM platform.
- Staff can also clock in/out with their mobile devices within a square radius

Dependencies:

- Central Payment System for payroll disbursement.
- GRA-published progressive PAYE tax bands and SSNIT contribution rates.

2.8 System Use Case Overview

The diagram below provides an overview of the primary actors and use cases of the CLET HRM system, grouped by functional module. Each ellipse represents a use case; lines connect actors to the use cases they initiate or participate in.

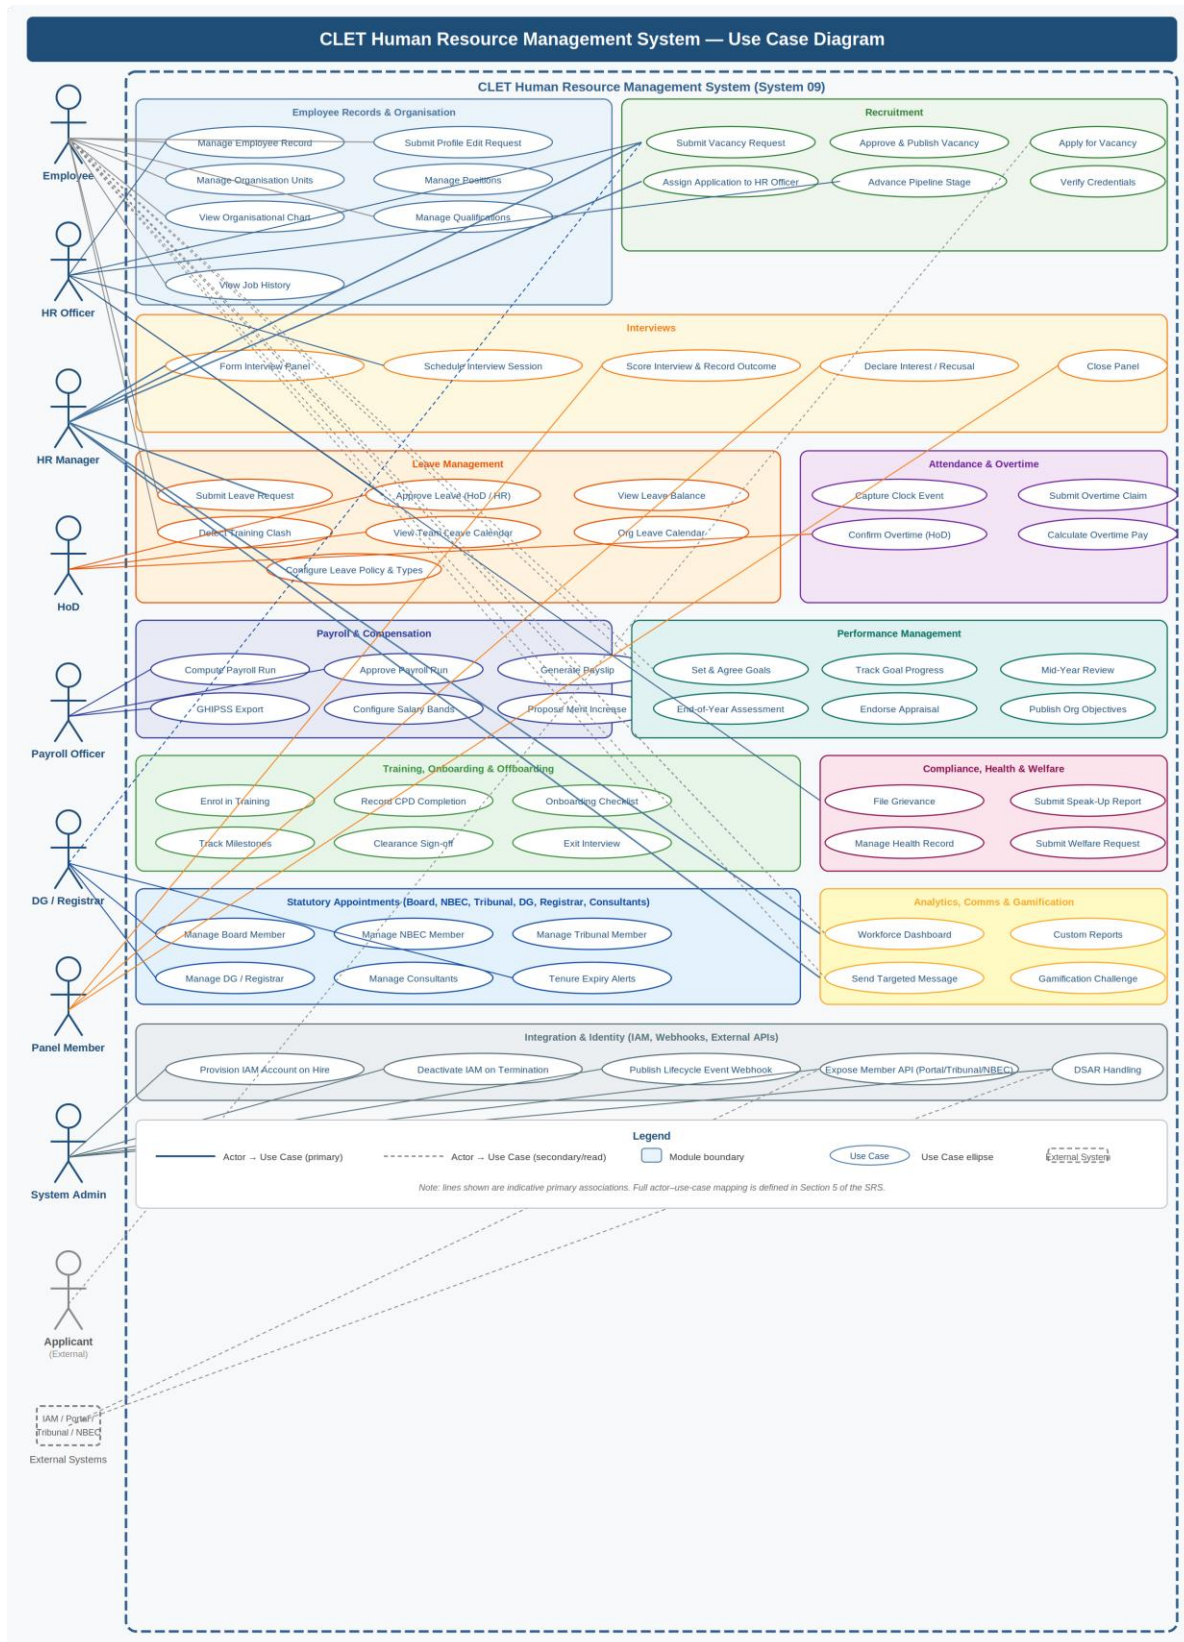

Figure 2-1: HRM System Use Case Diagram (overall view)

3. Software Requirement Specifications

MODULE: Employee Records & Organisation Structure

SRS-HRM-EMP-01: Create and Maintain Employee Records

User Story

As an HR Officer, I want to create and maintain individual employee records, so that Core HRMS holds accurate, current personal and employment data for every officer.

Requirements

- HR Officer can create, view, update, and soft-delete employee records.
- Employee record fields: personal details (name, DOB, Ghana Card number, Social Security Number, contact number, alternate contact number, next of kin name & contact number), position, grade, reporting line, directorate, contract/appointment details.
- System auto-generates a unique Employee ID in format EMP-CLET-YYYY-NNNN on creation.
- HR-only fields (name, DOB, Ghana Card Number, Social Security Number, grade, position, reporting line, directorate, contract details, salary) remain read-only to the employee at all times.
- Only personal-data subset such as contact details (phone, personal email, residential address), next-of-kin details and emergency contact details is editable by the employee, and only via the HR-approval workflow.

System-managed fields

- Employee UUID, Employee ID, Created By/Date, Last Modified By/Date.

Validation

- Employee Number must be unique, system-generated, format EMP-CLET-YYYY-NNNN.
- Only one active employment contract per employee at any time.
- Every field change is captured in a permanent, non-deletable audit trail (who, what, when).
- The NNNN is sequential and not dependent on the year

Workflow

- HR Officer creates record → system assigns Employee ID → record saved as the canonical employee identity used by every other module.
- Changes to HR-only fields are made directly by HR; changes to employee-editable personal fields follow the self-service edit and approval workflow.

Error States

- Duplicate Employee ID — "An employee record with this number already exists."
- Multiple Active Contracts — "This employee already has an active contract. End the existing contract before creating a new one."
- Unauthorized Edit Attempt — "This field can only be changed by HR. Please use the self-service edit request for personal data or contact HR for employment data."

Acceptance Criteria

- Given an HR Officer creates a new employee record, when the record is saved, then the system assigns a unique EMP-CLET-YYYY-NNNN identifier.

- Given an employee attempts to directly edit an HR-only field (e.g., grade, position, salary), when they try to save a change, then the system blocks the edit.
- Given any field on an employee record is changed, when the change is saved, then an audit entry (user, timestamp, before/after value) is recorded permanently.

SRS-HRM-EMP-02: Trigger Account Provisioning on Employee Creation

User Story

As a System Administrator, I want creation of an employee record to automatically notify connected systems, so that accounts and access are provisioned without manual intervention.

Requirements

- Employee record creation automatically triggers provisioning requests to connected systems: IAM, physical access, communications, and finance systems etc.
- Provisioning requests are dispatched immediately on record save with no manual trigger step.

Validation

- A provisioning request failure is logged and surfaced to the creating HR Officer without blocking the underlying employee record from being saved.
- The creation of the employee record itself is not blocked. Only IAM-dependent activation is blocked.

Workflow

- Employee record created → provisioning requests dispatched in parallel to connected systems → each system's own requirement (e.g., IAM) governs that system's specific provisioning logic.

Error States

- Provisioning Request Failed — "A provisioning request to [system] failed. Retry has been queued."

Acceptance Criteria

- Given an HR Officer creates a new employee record, when the record is saved, then provisioning requests are dispatched to all connected systems within seconds.
- Given a provisioning request to a connected system fails, when the failure occurs, then it is logged and retried without blocking the employee record itself.

SRS-HRM-EMP-03: Manage Organisation Units

User Story

As an HR Manager, I want to create and maintain the organisational unit hierarchy, so that every employee and position is correctly placed within CLET's structure.

Requirements

- Org hierarchy: Directorate → Unit → Sub-unit, with arbitrary nesting depth.
- Each unit has a head, type, and active/inactive status.
- HR Manager can view org chart with headcount by directorate and vacant positions (rendered visually).

Validation

- Org units cannot be deleted if they contain employees or active positions.

Workflow

- HR Manager creates/edits an org unit → unit becomes available for position assignment and employee placement.

Error States

- Org Unit Deletion Blocked — "This unit has employees or active positions assigned and cannot be deleted."

Acceptance Criteria

- Given an HR Manager attempts to delete an org unit containing active positions, when they try, then the system blocks the deletion.
- Given a new org unit is created, when it is saved, then it becomes available for position assignment.

SRS-HRM-EMP-04: Manage Positions**User Story**

As an HR Officer, I want to define and maintain organisational positions, so that headcount, grading, and reporting lines are explicit and budget-controlled.

Requirements

- Positions are defined with title, grade, org unit, reporting line, headcount budget, and status.
- A position's headcount budget defines the maximum number of employees who may simultaneously hold that position (e.g., a "Legal Officer" position with a headcount budget of 3 may have up to 3 active employees assigned to it at once); a headcount budget of 1 behaves as a single-incumbent position.
- An employee holds at least one position at a time; an employee may concurrently hold more than one position only where explicitly authorised by HR (e.g., an acting/interim assignment alongside a substantive position), with each concurrent assignment recording whether it is the employee's substantive position or an acting/additional assignment.

Validation

- The number of active employees assigned to a position cannot exceed that position's headcount budget.
- Each employee must have exactly one assignment flagged as their substantive position at any time, used as the reference for grade, salary band, and reporting line elsewhere in the platform; additional concurrent assignments do not alter this substantive reference unless an HR action (promotion or transfer) changes it.
- A position's org unit must be active.

Workflow

- HR Officer defines a position within an org unit, including its headcount budget → position becomes available for assignment during hire, promotion or transfer, up to the configured headcount budget.

Error States

- Position Headcount Exceeded — "This position's headcount budget has been reached. Increase the budget or assign to a different position."
- Missing Substantive Position — "Every employee must have exactly one position flagged as substantive."

Acceptance Criteria

- Given a position has a headcount budget of 3 with 3 active employees already assigned, when a fourth assignment is attempted, then the system blocks it.
- Given an employee is assigned to a position within its headcount budget, when the assignment is saved, then it succeeds and the position's remaining available headcount is reduced accordingly.
- Given an employee holds two concurrent position assignments, when their record is viewed, then exactly one is flagged as substantive and used as the reference for grade and salary band.

SRS-HRM-EMP-05: Maintain Job History

User Story

As an HR Officer, I want each employee's job history automatically maintained, so that CLET has a complete, verifiable internal employment record without manual duplicate entry.

Requirements

- The system maintains a chronological job history per employee, automatically appended whenever a hire, transfer, promotion, secondment, or contract change occurs - capturing position, grade, org unit, and effective dates.
- HR can additionally record prior employment history predating the employee's CLET service (external employer, role, dates) where relevant for service-length or pension calculations.
- Job history is visible (read-only) to the employee via their profile and to authorised HR roles.

Validation

- An employee cannot self-edit a job history entry; all job history entries are system-generated from the originating event or HR-entered for pre-CLET history.

Workflow

- Lifecycle event occurs (hire/transfer/promotion/secondment/contract change) → job history entry automatically appended.

Error States

- Unauthorized Job History Edit — "Job history entries are system-generated and cannot be edited directly."

Acceptance Criteria

- Given an employee is promoted, when the promotion is Effected, then a new job history entry is automatically appended reflecting the new position, grade, and effective date.
- Given an employee attempts to directly edit a job history entry, when they try, then the system blocks the edit.

SRS-HRM-EMP-06: Manage Organisational Chart

User Story

As an HR Manager, I want to view and maintain a live, visual organisational chart, so that reporting lines and structure are always accurate and easy to navigate.

Requirements

- The system automatically renders an interactive organisational chart from the live org hierarchy and position data; the chart is a visual representation of existing structure, not separately maintained data.
- Users can navigate the chart by drilling into a directorate/unit, view vacant positions distinctly from filled ones, and view an employee's position and reporting line by clicking their node.
- The chart reflects organisational changes (transfers, promotions, new hires, retirements, unit restructuring) in real time.
- HR Managers can export the current organisational chart (or a selected sub-tree) as an image or PDF for offline use.
- Role-based visibility applies: a Head of Directorate sees their full directorate's chart in detail; other employees see names and titles but not sensitive attributes (e.g., salary) on chart nodes.

Validation

- The chart must always reflect the current state of org/position data with no manual re-entry.

Workflow

- Org unit, position, or employee record changes → chart re-renders automatically → users view/export the current chart.

Error States

- Chart Render Failure — "The organisational chart could not be rendered. Please refresh or contact support."

Acceptance Criteria

- Given an employee is transferred to a new org unit, when the transfer is Effected, then the organisational chart reflects the employee's new position immediately.
- Given an HR Manager exports the organisational chart, when the export completes, then it is delivered as a PDF or image file reflecting the current structure.
- Given an employee without Head of Directorate-level access views the chart, when they view a node, then they see names and titles only, not salary or other sensitive attributes.

SRS-HRM-EMP-07: Manage Educational Qualifications

User Story

As an Employee, I want to record and maintain my educational qualifications, so that CLET has a verified record of my academic credentials.

Requirements

- Employees can record and update their educational qualifications via the ESS portal: institution, qualification/degree, field of study, dates attended, and grade/classification, with supporting certificate upload.
- HR verifies uploaded qualification documents; verification status (Unverified, Verified, Rejected) is HR-managed.
- Qualifications are visible (read-only) to the employee via their profile and to authorised HR roles.

Validation

- A qualification cannot be marked Verified without an attached supporting document.

Workflow

- Employee submits qualification with supporting document via ESS portal → HR reviews and verifies or rejects.

Error States

- Missing Qualification Document — "A supporting certificate is required before this qualification can be verified."

Acceptance Criteria

- Given an employee uploads a qualification certificate, when HR reviews it, then HR can mark it Verified or Rejected, and the status is reflected on the employee's profile.
- Given a qualification has no supporting document, when HR attempts to mark it Verified, then the system blocks the action.

SRS-HRM-EMP-08: Submit Profile Edit Request for HR Approval

User Story

As an Employee, I want to edit certain personal details on my own record and have the change take effect once HR approves it, so that I can keep my information current without waiting on a manual correction request handled entirely outside the system.

Requirements

- Employees can edit a defined subset of personal-data fields via the ESS portal: contact details (phone, personal email, residential address), next-of-kin details, and emergency contact details.
- All other fields on the employee record (name, DOB, Ghana Card number, Social Security Number, position, grade, reporting line, directorate, contract/appointment details, salary) remain HR-only and are not editable via this self-service path.
- An employee-submitted edit does not take effect immediately; it is saved as a Pending Edit alongside the current (unchanged) live value, and the live value continues to be used by all other modules until the edit is approved.
- HR Officer reviews the Pending Edit, seeing both the current and proposed value, and Approves or Rejects (with reason).
- On Approval, the proposed value becomes the live value effective immediately and the change is recorded in the audit trail; on Rejection, the live value is unchanged and the employee is notified of the rejection reason.

Validation

- A field with a Pending Edit cannot have a second edit submitted against it until the first is Approved or Rejected.
- The employee-editable field list is centrally configured and enforced identically whether the edit is attempted via the ESS portal or any other entry point.

Workflow

- Employee submits an edit to an editable field via the ESS portal → edit saved as Pending, live value unchanged → HR Officer reviews current vs. proposed value → Approves (live value updated, audit entry recorded) or Rejects (live value unchanged, employee notified with reason).

Error States

- Field Not Employee-Editable — "This field can only be changed by HR. Please contact HR to update this information."
- Edit Already Pending — "You already have a pending edit for this field. Please wait for HR to review it before submitting another change."

Acceptance Criteria

- Given an employee submits an edit to their phone number, when it is submitted, then it is saved as a Pending Edit and the live phone number remains unchanged until HR acts on it.
- Given HR approves a Pending Edit, when the approval is recorded, then the proposed value becomes the live value and an audit entry is recorded capturing the employee as the originator and the HR Officer as the approver.
- Given HR rejects a Pending Edit, when the rejection is recorded, then the live value remains unchanged and the employee is notified of the rejection reason.
- Given an employee attempts to submit a second edit to a field that already has a Pending Edit, when they try, then the system blocks the submission until the first edit is resolved.

MODULE: Recruitment

SRS-HRM-REC-01: Submit Vacancy Request

User Story

As a Head of Directorate, I want to request a new vacancy with justification, so that recruitment only proceeds for validated organisational needs.

Requirements

- HoD can submit a vacancy request specifying employment type (permanent, contract, consultant), required skills/qualifications, and written justification.
- Vacancy includes position reference, contract type, salary band range, job description, requirements and closing date.
- Each vacancy is assigned a unique reference number (VAC-YYYY-NNN) on submission.

Validation

- Salary band range must align with the position's grade.
- A written justification is mandatory before submission.

Workflow

- HoD completes vacancy request form → system assigns VAC-YYYY-NNN reference → request enters the approval workflow.

Error States

- Missing Justification — "A written justification is required to submit a vacancy request."

Acceptance Criteria

- Given a HoD submits a vacancy request, when it is saved, then the system assigns a unique VAC-YYYY-NNN reference.
- Given a HoD attempts to submit a vacancy request without justification, when they try, then the system blocks submission.

SRS-HRM-REC-02: Approve and Publish Vacancy

User Story

As an HR Manager/DG, I want vacancy requests routed through the correct approval chain and published only once approved, so that recruitment only opens for validated, authorised positions.

Requirements

- Vacancies with Management Grade+ are automatically flagged for Board approval.
- Vacancies follow the state machine: Draft → Approved → Published → Closed/Cancelled/Filled.
- Approval chain 1: HR validates → DG gives final approval (Board approval additionally required for Management Grade+).
- Approval chain 2: HR validates → DG gives final approval (Board approval additionally required for Management Grade+) → Administrator Publish.

Validation

- Vacancy cannot be published until the approval chain is complete.

Workflow

- HoD submits → HR validates → DG approves (+ Board for Management Grade+).
- HoD submits → HR validates → DG approves (+ Board for Management Grade+) → Administrator Publishes, vacancy published to the career site.

Error States

- Unauthorized Publish Attempt — "This vacancy cannot be published until all required approvals are completed."

Acceptance Criteria

- Given a HoD submits a vacancy request for a Management Grade+ position, when HR validates it, then the request is routed for Board approval before DG final sign-off.
- Given a vacancy is approved, when it is published, then it appears on the career site with its VAC-YYYY-NNN reference and an apply option.

SRS-HRM-REC-03: Submit and Track Job Application

User Story

As an Applicant, I want to apply for a vacancy and track my application status, so that I know where I stand in the hiring process without contacting HR.

Requirements

- Applicants apply via a self-service portal with CV, cover letter, name, email and phone — applications cannot be created by HR staff.
- Applicant-facing portal allows applicants to log in and track stage: Submitted → Under Review → Shortlisted → Interview → Assessment → Offer → Accepted → Hired/Rejected.

Validation

- An application can only be submitted against a Published vacancy.

Workflow

- Applicant submits application via portal → application enters Applied/Submitted stage → HR Officers move it through stages.

Error States

- Vacancy Not Open — "This vacancy is not currently accepting applications."

Acceptance Criteria

- Given an applicant submits an application to a Published vacancy, when it is submitted, then it enters the Applied/Submitted stage and is visible in the applicant's portal.
- Given an applicant logs into the portal, when they view their application, then they see its current stage.

SRS-HRM-REC-04: Assign and Manage Applicant Pipeline Stages

User Story

As an HR Manager, I want to assign job applications to specific HR Officers for review and track each application through the pipeline stages, so that recruitment workload is distributed deliberately and every application has a clear owner accountable for its progression.

Requirements

- HR Manager reviews the incoming application queue (all applications at Applied/Submitted or Screening/Under Review stage for a given vacancy) and assigns each application to a named HR Officer from a picklist of active HR Officers.
- An application cannot move beyond the Screening/Under Review stage until it has been assigned to an HR Officer.
- The assigned HR Officer receives an in-app notification of the new assignment and can see their personal assignment queue — a filtered view of all applications currently assigned to them, across all active vacancies.
- The HR Officer assigned to an application may move it through pipeline stages (Applied/Submitted → Screening/Under Review → Shortlisted → Interview → Assessment → Offer → Accepted), add structured notes at each stage, and record panel scoring (interview scoring detail).
- HR Manager can reassign an application to a different HR Officer at any stage, with the reason for reassignment recorded; the prior assignee is notified of the reassignment.
- HR Manager sees the full pipeline view across all vacancies and all HR Officers, including application counts by stage and by assignee.

Validation

- Every stage transition and assignment/reassignment action must be logged for audit, recording the acting user, timestamp, and stage or assignee before/after.
- An application cannot be assigned to a user who does not hold the HR Officer or HR Manager role.

Workflow

- Application submitted by applicant → enters Applied/Submitted stage → HR Manager reviews queue → HR Manager assigns application to HR Officer → HR Officer notified → HR Officer reviews, advances, or rejects → stage and action logged → HR Manager monitors pipeline across all assignees.

Error States

- Unassigned Application Advance Blocked — "This application cannot proceed beyond Screening/Under Review until it has been assigned to an HR Officer."
- Invalid Assignee — "Applications can only be assigned to users holding the HR Officer or HR Manager role."
- Invalid Stage Transition — "This application cannot move to the selected stage from its current stage."

Acceptance Criteria

- Given an application is at the Screening/Under Review stage with no assigned HR Officer, when any user attempts to advance it, then the system blocks the transition and displays the assignment requirement.
- Given an HR Manager assigns an application to an HR Officer, when the assignment is saved, then the HR Officer receives an in-app notification and the application appears in their assignment queue.

- Given an HR Manager reassigns an application, when the reassignment is saved, then the reason is recorded, both the prior and new assignee are notified, and the action is captured in the audit log.
- Given an HR Officer is assigned an application, when they advance it to the next stage, then the transition is logged with the officer's identity, timestamp, and stage before/after.

SRS-HRM-REC-05: Verify Prospective Employee Credentials and Background

User Story

As an HR Officer, I want prospective employee credentials and background verified before hire, so that only verified, qualified candidates are converted to employees.

Requirements

- Document and credential verification occurs during recruitment, before offer: Ghana Card, professional certifications (e.g., Bar exam number), degree certificates, reference checks.
- Background checks are triggered to external vendors via API when an application reaches Offer Acceptance stage; status tracked Not Started → In Progress → Passed/Failed.
- Verification requirements are configurable per role category.

Validation

- A prospective employee who fails any required verification or background check is blocked from conversion to employee; this block is system-enforced and cannot be bypassed.

Workflow

- Application reaches Offer Acceptance stage → verification and background check triggered → result recorded → conversion to employee blocked or permitted based on result.

Error States

- Verification Failed — "This candidate has failed a required verification check and cannot be converted to an employee."
- Background Check Failed — "Background check result is Failed. Hire is blocked for this application."

Acceptance Criteria

- Given a candidate has not completed all required verification checks, when HR attempts to convert them to an employee, then the system blocks the action.
- Given a candidate passes all checks and accepts an offer, when HR converts the applicant, then a new employee record is created and onboarding is triggered.

MODULE: Interviews

SRS-HRM-INT-01: Form an Interview Panel

User Story

As an HR Manager, I want to constitute a formal interview panel for a vacancy or promotion case, so that the panel's composition, authority, independence, and terms of reference are recorded and approved before any interview is scheduled.

Requirements

- HR Manager can create an interview panel record linked to a specific vacancy or promotion case, capturing: panel name/reference, purpose (recruitment or promotion), linked vacancy/case reference, and terms of reference.
- Panel composition fields per member: employee name (linked to employee record), role on panel (Chairperson, Member, Observer), professional designation/qualification relevant to the role being assessed, and declaration of interest status (None Declared / Interest Declared / Recused).
- Minimum panel size is configurable per vacancy grade or promotion grade (e.g., minimum 3 members for Grade 10 and above); the system enforces this minimum before the panel can be confirmed.
- The panel Chairperson must be of a grade equal to or higher than the grade of the vacancy or promotion being assessed; this is system-validated against the Chairperson's current grade on their employee record.
- A panel member who has declared an interest in a candidate or the vacancy is automatically flagged as Recused from scoring that candidate; they remain on the panel record for audit purposes but are excluded from composite score calculation for that candidate.
- The HR Manager can add, remove, or replace panel members before the panel is Confirmed; after Confirmation no changes are permitted without HR Manager override (with a recorded reason logged to the audit trail).
- Panel status follows the state machine: Draft → Submitted for Approval → Confirmed → Active (once the first interview is scheduled) → Concluded (once all rounds are complete and outcomes recorded).
- Panel approval authority: for Management Grade+ vacancies or promotions, the panel must be confirmed by the DG or Registrar; for all other grades, the HR Manager's own confirmation suffices.
- Once confirmed, all panel members receive an automatic notification of their appointment to the panel, including the vacancy/case reference, their role, the terms of reference, and expected availability dates.

Validation

- A panel cannot be Confirmed with fewer members than the configured minimum for the relevant grade.
- A panel cannot be Confirmed without exactly one member designated as Chairperson.
- The Chairperson's grade must be equal to or higher than the grade of the vacancy/promotion being assessed; a lower-grade Chairperson designation is blocked.
- A panel cannot move to Active status without at least one interview scheduled against.

- A confirmed panel cannot be modified without an HR Manager override and recorded reason.

Workflow

- HR Manager creates panel record → selects linked vacancy or promotion case → adds members with roles and interest declarations → system validates composition (minimum size, Chairperson grade, conflict of interest) → HR Manager submits for approval → DG/Registrar approves (Management Grade+) or HR Manager self-confirms (below Grade 15) → panel status → Confirmed → notification sent to all panel members → first interview scheduled → panel status → Active → all rounds complete and outcomes recorded → panel status → Concluded.

Error States

- Minimum Panel Size Not Met — "This panel requires at least [n] members for the grade of this vacancy. Add more members before confirming."
- Missing Chairperson — "Exactly one panel member must be designated as Chairperson before this panel can be confirmed."
- Chairperson Grade Insufficient — "The designated Chairperson's grade is below the grade of the vacancy or promotion being assessed."
- Post-Confirmation Edit Blocked — "This panel is Confirmed. Changes require an HR Manager override with a recorded reason."
- Missing DG/Registrar Approval — "Panels for Management Grade+ vacancies or promotions must be confirmed by the DG or Registrar."

Acceptance Criteria

- Given an HR Manager attempts to confirm a panel with fewer than the configured minimum members, when they try, then the system blocks confirmation and states the required minimum.
- Given a panel is created for a Management Grade+ vacancy, when the HR Manager submits it for approval, then it is routed to the DG or Registrar for confirmation before becoming Active.
- Given a panel member declares an interest in a candidate, when the declaration is recorded, then that member's status for that candidate is set to Recused and they are excluded from composite score calculation for that candidate.
- Given a panel is Confirmed, when all panel members are notified, then each receives the vacancy/case reference, their role on the panel, the terms of reference, and expected availability dates.
- Given an HR Manager attempts to modify a Confirmed panel without an override, when they try, then the system blocks the change and requires a reason to be recorded.

SRS-HRM-INT-02: Schedule Interview

User Story

As an HR Officer, I want to schedule recruitment and promotional interviews, so that candidates and panels have clear, recorded interview logistics.

Requirements

- HR can schedule an interview for an application or a promotion case, recording: date/time, location or virtual link, panel members (linked to employee records), and interview round (e.g., first round, panel, final).
- Candidates/employees can view their own scheduled interview date, time, and location (not panel scores or comments) through the applicant portal or ESS portal respectively.

Validation

- Panel membership for a promotional interview must exclude the candidate's direct reporting line where a conflict of interest would arise, flagged for HR review if detected.

Workflow

- Interview scheduled → candidate/employee notified of date, time, location.

Error States

- Conflict of Interest Flagged — "A panel member has a direct reporting relationship with this candidate. Please review panel composition."

Acceptance Criteria

- Given an interview is scheduled, when it is saved, then the candidate/employee is notified of the date, time, and location.
- Given a promotional interview panel includes the candidate's direct line manager, when the panel is saved, then the system flags the conflict of interest for HR review.

SRS-HRM-INT-03: Score Interview and Record Outcome

User Story

As a Panel Member, I want to score candidates against a structured rubric independently of other panel members, so that interview decisions are comparable and free of anchoring bias.

Requirements

- Each panel member records a structured score against a configurable scoring rubric (criteria and weights defined per role/grade) and free-text comments; scores are not visible to other panel members until all have submitted.
- The system calculates a composite interview score per candidate per round, visible to HR and the approving authority.
- Interview outcomes (recommend / do not recommend / recommend with conditions) feed into the next stage of the relevant workflow (recruitment offer stage, or promotion endorsement stage).

Validation

- An interview cannot be marked complete until all assigned panel members have submitted a score.
- A panel member cannot score the same candidate/round more than once.

Workflow

- Interview conducted → each panel member submits score and comments independently → composite score calculated once all submissions received → outcome recorded.

Error States

- Incomplete Panel Scoring — "This interview cannot be marked complete until all panel members have submitted their scores."
- Duplicate Score Submission — "You have already submitted a score for this candidate and round."

Acceptance Criteria

- Given all panel members submit their scores for an interview round, when the last score is submitted, then the system calculates and displays the composite score.
- Given a panel member attempts to view another panel member's score before submitting their own, when they try, then the system withholds the other scores until their own submission is complete.

MODULE: Secondment Lifecycle

SRS-HRM-SEC-01: Request and Approve Secondment

User Story

As a Registrar/DG/HR Officer, I want to request and record approval of a secondment, so that officers seconded from parent bodies are formally onboarded into CLET's structure.

Requirements

- Registrar/DG can request a named officer or skill profile from a parent body, specifying role, grade, expected duration, and reporting line.
- HR records secondment details on parent body approval: parent body name, substantive grade, start/end dates, payroll stream (CAGD, CLET, or top-up), renewal count.
- Onboarding trigger fires automatically on secondment acceptance (contract type "secondment"), provisioning IT accounts, badge access, and onboarding checklist.

Validation

- Secondment cannot be activated without a recorded parent body approval letter.

Workflow

- CLET requests → parent body approves (formal secondment letter recorded) → CLET accepts → onboarding trigger fires → secondment becomes Active.

Error States

- Missing Parent Approval — "Secondment cannot be activated without a recorded parent body approval letter."

Acceptance Criteria

- Given a secondment request is approved by the parent body and accepted by CLET, when the acceptance is recorded, then the onboarding workflow is automatically triggered.
- Given a secondment activation is attempted without a recorded parent body approval letter, when it is attempted, then the system blocks activation.

SRS-HRM-SEC-02: Administer Active Secondment

User Story

As an HR Officer, I want to track and administer an active secondment through to its end, expiry, or extension, so that secondment arrangements remain accurate and time-bound.

Requirements

- During active secondment, leave, attendance, and performance are managed by CLET; payroll follows the agreed stream.
- Extension requires fresh parent body approval and a recorded new end date.
- HR Manager dashboard shows total active secondments, breakdown by parent body, upcoming expirations, and average duration.

Validation

- Extension requires fresh parent body approval and a recorded new end date.

Workflow

- Active Secondment → Expiry Alerts (60 and 30 days prior to end date) → Extension (renewed, with fresh approval) or End of Secondment (offboarding triggered, status → "returned").

Error States

- Expired Without Extension — "This secondment has reached its end date without an extension. Offboarding has been triggered."

Acceptance Criteria

- Given a secondment is 60 days from its end date, when the system runs its daily check, then HR receives an expiry alert.
- Given a secondment ends without extension, when the end date passes, then the offboarding workflow is triggered and the officer's status changes to "returned".

MODULE: Internal Mobility

SRS-HRM-MOB-01: Initiate and Approve Promotion

User Story

As an HR Officer, I want a dedicated promotion workflow distinct from new hire recruitment, so that internal advancement is assessed fairly and against grade-band rules.

Requirements

- A promotion case can be initiated by a manager's nomination, an HoD endorsement following the performance appraisal cycle (e.g. "appraisal recommendation: promote"), or an employee's application to an internally posted vacancy.
- A promotion case records: current position/grade, proposed position/grade, justification, supporting performance ratings, and any promotional interview outcome.
- Promotion cases follow the state machine: Nominated → Under Review → Interview (where required) → Endorsed → Approved → Effected or Declined at any stage.
- Promotions to Management Grade+ require Board approval, consistent with the delegated authority matrix used for vacancies.

Validation

- A promotion case cannot move to Approved without a recorded endorsement from the employee's HoD.
- A proposed grade must be higher than the employee's current grade; lateral or downward moves are handled as a transfer, not a promotion.

Workflow

- Promotion case initiated → Under Review → Interview if required → HoD Endorsement → Approval (Head of Directorate, or Board for Management Grade+) → Effected or Declined.

Error States

- Missing HoD Endorsement — "This promotion cannot be approved without a recorded HoD endorsement."
- Invalid Grade Movement — "The proposed grade is not higher than the employee's current grade. Use the transfer process instead."

Acceptance Criteria

- Given a promotion case reaches the Approved stage for a Management Grade+ position, when approval is requested, then the system routes it for Board approval before it can be Effected.
- Given an employee's full record is viewed, when their history is displayed, then all past promotion cases and outcomes are visible.

SRS-HRM-MOB-02: Effect Promotion

User Story

As an HR Officer, I want an approved promotion to automatically update the employee's position, grade, and pay, so that the change is reflected consistently across the platform without manual re-entry.

Requirements

- On a promotion being Effected, the employee's position, grade, and salary band are updated effective-dated, and the change is reflected in the next payroll run.
- The full promotion history of an employee (all cases, outcomes, and dates) is retained and visible on their employee record.

Validation

- An Effected promotion must result in a salary that falls within the new grade's salary band, or be flagged for escalation if not.

Workflow

- Promotion case Approved → Effected → position/grade/salary updated → payroll notified → job history entry appended.

Error States

- Out-of-Band Salary — "The resulting salary falls outside the new grade's band and requires escalation."

Acceptance Criteria

- Given a promotion is Effected, when the change is saved, then the employee's grade, position, and salary are updated effective-dated and reflected in the next payroll run.

SRS-HRM-MOB-03: Manage Internal Transfer

User Story

As an HR Officer, I want a dedicated workflow for lateral and cross-directorate transfers, so that employee movement between positions at the same grade is tracked distinctly from promotion.

Requirements

- A transfer case can be initiated by an employee's request, a manager's nomination, or an HR-led restructuring action, specifying: current position/org unit, proposed position/org unit, proposed reporting line, and justification.
- Transfer cases follow the state machine: Requested → Under Review → Approved → Effected, or Declined at any stage.
- Approval requires sign-off from both the releasing HoD (current org unit) and the receiving HoD (proposed org unit).

Validation

- A transfer cannot be Effected without sign-off from both the releasing and receiving HoD.
- A transfer that would result in a grade change is blocked and redirected to the promotion process.

Workflow

- Transfer requested/nominated → Under Review → releasing HoD sign-off → receiving HoD sign-off → Approved → Effected or Declined.

Error States

- Missing Dual Sign-Off — "This transfer cannot be approved until both the releasing and receiving HoD have signed off."
- Grade Change Detected — "This movement involves a grade change and must be processed as a promotion, not a transfer."

Acceptance Criteria

- Given a transfer case has sign-off from only one of the two required HoDs, when approval is attempted, then the system blocks it until the second sign-off is recorded.
- Given a proposed transfer would change the employee's grade, when the case is submitted, then the system blocks it and directs the requester to the promotion process.

SRS-HRM-MOB-04: Effect Internal Transfer**User Story**

As an HR Officer, I want an approved transfer to automatically update the employee's position and reporting line, so that organisational data stays accurate without manual re-entry.

Requirements

- On a transfer being Effected, the employee's position, org unit, and reporting line are updated effective-dated; grade and salary band remain unchanged.
- The employee's full transfer history is retained and visible on their employee record.

Validation

- Grade and salary must remain unchanged on a transfer; any salary change accompanying a transfer request is rejected and redirected to the compensation process.

Workflow

- Transfer case Approved → Effected → org unit, position, and reporting line updated → organisational chart updated → job history entry appended.

Error States

- Unexpected Salary Change — "A transfer cannot include a salary change. Use the compensation process instead."

Acceptance Criteria

- Given a transfer is Effected, when the change is saved, then the employee's org unit, position, and reporting line update effective-dated, and the change is reflected on the organisational chart.

MODULE: Leave Management

SRS-HRM-LVE-01: Configure Leave Types

User Story

As an HR Administrator, I want to configure individual leave types centrally, so that each type of leave is governed by its own explicit, consistent rules.

Requirements

- HR Administrator can define leave types (annual, sick, maternity, paternity, compassionate, study, unpaid, and any future type) each with: accrual method (annual lump-sum, monthly accrual, or service-length-based), default entitlement days, minimum service period before eligibility, whether half-days are permitted, whether carry-over is permitted (and a maximum carry-over cap), and whether the type requires supporting documentation.

Validation

- A leave type cannot be saved without an accrual method and default entitlement value.

Workflow

- HR Administrator defines/updates a leave type → type becomes available for entitlement computation and for leave requests.

Error States

- Incomplete Leave Type Definition — "An accrual method and default entitlement are required before this leave type can be saved."

Acceptance Criteria

- Given an HR Administrator defines a new leave type, when it is saved, then it becomes selectable on leave requests and entitlement computation.

SRS-HRM-LVE-02: Compute Leave Entitlement

User Story

As an Employee, I want my leave entitlement computed automatically and correctly, so that I always know how much leave I am owed without manual calculation.

Requirements

- Annual leave entitlement computation follows the configured accrual method and automatically applies Ghana Labour Act minimums (15 working days after 12 months continuous service) as a system-enforced floor, that policy values cannot fall below.
- Pro-rated entitlement is automatically computed for employees who join, are confirmed, or change contract type partway through a leave year.
- The Ghana Labour Act minimum 12-week maternity leave is enforced as a system floor for the maternity leave type.

Validation

- Configured entitlement values cannot be set below the Ghana Labour Act statutory minimum for the corresponding leave type.

Workflow

- Employee's leave year begins, or employee joins/changes contract mid-year → system computes entitlement using the configured accrual method, pro-rated where applicable → entitlement becomes the opening balance on the leave ledger.

Error States

- Below Statutory Minimum — "This entitlement value is below the Ghana Labour Act minimum and cannot be saved."

Acceptance Criteria

- Given an HR Administrator attempts to set annual leave entitlement below 15 working days, when they try to save, then the system blocks the change.
- Given an employee joins mid-year, when their leave balance is calculated, then it reflects a pro-rated entitlement based on their start date and the configured accrual method.

SRS-HRM-LVE-03: Publish Leave Policy

User Story

As an HR Administrator, I want the full leave policy published as a single version-controlled document, so that employees and managers always reference current, accurate policy.

Requirements

- The full leave policy (all leave types, entitlement rules, and parameters) is published as a single, version-controlled Leave Policy document, viewable by all employees via the ESS portal and policy repository.
- Changes to leave policy parameters are effective-dated; an employee's leave already approved or in progress under a prior policy version is not retroactively recalculated unless explicitly migrated by HR.

Validation

- A change to leave policy parameters requires a recorded change-reason note and is captured in the audit trail.

Workflow

- HR Administrator updates a leave type or policy parameter → change published with effective date and change-reason note → prior policy version retained for reference.

Error States

- Missing Change Reason — "A change-reason note is required when modifying leave policy parameters."

Acceptance Criteria

- Given the leave policy is updated, when an employee views the policy repository, then the current version is shown, with the effective date and prior versions retained for reference.

SRS-HRM-LVE-04: Submit Leave Request

User Story

As an Employee, I want to submit a leave request specifying type, dates, and supporting documentation where required, so that my time off is formally recorded and routed for approval.

Requirements

- Employees submit leave requests specifying leave type, dates, and half-day option (supported for all types that permit it).
- Sick leave exceeding 3 days requires a medical certificate upload.

Validation

- A request exceeding remaining balance is rejected with a clear message unless overridden by an authorised HR officer (with audit logging).

Workflow

- Employee submits leave request via ESS portal → system checks balance and documentation requirements → request enters the approval workflow.

Error States

- Insufficient Balance — "You do not have enough remaining leave balance for this request."
- Missing Medical Certificate — "A medical certificate is required for sick leave exceeding 3 days."

Acceptance Criteria

- Given an employee requests leave exceeding their remaining balance, when they submit, then the system rejects the request unless an authorised HR officer overrides it with a logged reason.
- Given an employee requests their full entitlement at once, when they submit, then a high-priority notification is sent to HoD, HR, and DG.

SRS-HRM-LVE-05: Detect Leave & Training Clash**User Story**

As an HoD, I want to be warned when a leave request overlaps mandatory training, so that I don't approve leave that conflicts with required attendance.

Requirements

- When an employee submits a leave request, the system checks for a clash against any CPD/training session for which the employee is enrolled or has mandatory attendance within the requested leave dates, and surfaces this clash to both the employee and the approving HoD before approval.
- The clash warning is advisory and does not block submission, but a clash must be acknowledged (or the leave dates adjusted, or the training rescheduled/excused) before the HoD can approve.

Validation

- A leave request overlapping a mandatory training session cannot be HoD-approved without an explicit acknowledgement reason recorded (e.g., "training rescheduled", "attendance excused by HR").

Workflow

- Employee submits leave request → system checks training-clash against the employee's enrolled/mandatory sessions → clash surfaced to employee and HoD if found → HoD acknowledges or resolves before approving.

Error States

- Unacknowledged Training Clash — "This leave request overlaps a mandatory training session. Please acknowledge the clash before approving."

Acceptance Criteria

- Given an employee requests leave that overlaps a mandatory training session they are enrolled in, when the HoD reviews the request, then the system displays a training-clash warning requiring acknowledgement before approval.

SRS-HRM-LVE-06: View Team Leave Calendar**User Story**

As an HoD, I want to see my team's approved and pending leave days before approving a new request, so that I can assess coverage impact.

Requirements

- HoDs see a team leave calendar showing all direct reports' approved and pending leave days, to assess coverage before approving a new request.

Validation

- A HoD's team leave calendar view is restricted to their own direct reports.

Workflow

- HoD opens a pending leave request for review → team leave calendar is displayed alongside the request, showing all direct reports' leave days.

Error States

- Unauthorized Team Scope — "You can only view leave data for your own direct reports."

Acceptance Criteria

- Given an HoD opens a leave request for review, when the review screen loads, then it displays the team leave calendar showing all direct reports' approved and pending leave days.

SRS-HRM-LVE-07: Provide Organisational Leave Calendar**User Story**

As an Employee/Manager, I want a single organisational leave calendar showing approved leave across the organisation, so that teams can plan around colleague availability.

Requirements

- The system provides an organisational leave calendar, viewable by all employees via the ESS portal, showing approved leave (employee name, leave type, dates) scoped to the viewer's own directorate/team by default.
- HR Managers and Heads of Directorate can view the full organisation-wide leave calendar across all directorates.
- The calendar is filterable by directorate, org unit, and leave type, and integrates with the organisational events calendar so public holidays and other organisational events are visible alongside leave.

- The calendar reflects approved leave only; pending requests remain visible only to the requester and their HoD, not the wider organisational calendar.

Validation

- An employee's view of the organisational leave calendar is restricted to their own directorate/team unless their role grants broader access (HR Manager, Head of Directorate).

Workflow

- Leave request approved → entry added to organisational leave calendar → calendar visible per the viewer's role-based scope.

Error States

- Unauthorized Calendar Scope — "You do not have permission to view leave data outside your directorate."

Acceptance Criteria

- Given a leave request is approved, when the approval is recorded, then it appears on the organisational leave calendar within the requester's directorate view.
- Given an HR Manager opens the organisational leave calendar, when it loads, then leave across all directorates is visible, not just their own.

SRS-HRM-LVE-08: Track Leave Ledger

User Story

As an Employee, I want a real-time, accurate ledger of my leave balance, so that I always know my entitlement, usage, and remaining days.

Requirements

- The system maintains a running ledger of leave days per employee per leave type: entitlement, days taken, days pending approval, days remaining, and carried-over days, updated in real time.
- Real-time leave balance shown on employee dashboard.

Validation

- The leave ledger (taken/pending/remaining) must reconcile exactly with the sum of all approved, pending, and cancelled requests for that employee and leave type at all times.
- Remaining balance recalculates atomically on submission, approval, rejection, cancellation, or manual adjustment; manual adjustments are logged.

Workflow

- Leave request submitted, approved, rejected, or cancelled → leave ledger recalculates immediately.

Error States

- Ledger Reconciliation Error — "The leave ledger could not be reconciled for this employee. Contact System Administrator."

Acceptance Criteria

- Given a leave request is approved, rejected, or cancelled, when the action is recorded, then the employee's leave ledger (taken/pending/remaining) updates immediately and reconciles correctly.

SRS-HRM-LVE-09: Approve Leave Request (HoD and HR)

User Story

As HoD, I want to review and approve leave requests as the first approval stage, so that leave is authorised by the requester's direct supervisor before HR finalises it.

Requirements

- Line managers & HoDs see pending requests from subordinates only; HR officers can approve on behalf of absent managers (logged).
- HoD approval is the first approval stage for all leave types; HR gives final approval.
- DG is notified via SMS and in-app for awareness only (no approval action required).

Validation

- A manager approving leave on behalf of an absent manager must have this on-behalf action logged distinctly from a normal approval.

Workflow

- Employee submits → HoD approves, rejects or sends back for review (resolving any training clash, with team calendar context) → HR gives final approval/rejection → DG notified for awareness → leave ledger updated.
- Status visible to employee at each stage: "Pending HoD" → "HoD Approved, Pending HR" → "Approved"/"Rejected".
- Approved leave triggers a webhook event for downstream systems and is logged as an immutable event.

Error States

- Unacknowledged Training Clash — "This leave request overlaps a mandatory training session. Please acknowledge the clash before approving."
- Insufficient Balance — "You do not have enough remaining leave balance for this request."

Acceptance Criteria

- Given a leave request is approved, when approval is recorded, then the employee's balance updates instantly and a webhook event fires.
- Given a manager approves leave on behalf of an absent manager, when the action is recorded, then the system logs the on-behalf action distinctly from a normal approval.

MODULE: Overtime Management

SRS-HRM-OVT-01: Submit and Confirm Overtime Claim

User Story

As an Employee, I want to submit overtime claims for HoD confirmation, so that eligible overtime is accurately processed for payment.

Requirements

- Employee submits overtime claim specifying date, hours worked, and description of work performed.
- Claim routes to HoD for confirmation; only HoD-confirmed claims proceed to payment.
- Eligibility is enforced by the system based on grade/category.

Validation

- Claims from employees not eligible per their grade/category are blocked from submission.

Workflow

- Employee submits claim → HoD confirms or rejects → confirmed claims queued for pay calculation.

Error States

- Ineligible Claimant — "Your staff category is not eligible for overtime claims."

Acceptance Criteria

- Given an employee not eligible for overtime submits a claim, when they attempt to submit, then the system blocks the claim with an eligibility error.
- Given a HoD confirms an overtime claim, when confirmation is recorded, then the claim is automatically queued for pay calculation.

SRS-HRM-OVT-02: Calculate Overtime Pay

User Story

As a Payroll Officer, I want overtime pay to be calculated automatically from confirmed claims and configurable rates, so that overtime compensation is accurate and reconcilable.

Requirements

- Overtime pay = confirmed overtime hours × the employee's hourly rate (derived from basic salary per the configured standard working hours) × the applicable overtime multiplier.
- Overtime multipliers are configurable per category, at minimum: weekday overtime, weekend/rest-day overtime, and public-holiday overtime, each with an independently configurable multiplier (e.g., 1.5x, 2.0x).
- The system automatically determines the applicable multiplier for each confirmed claim based on the date worked (cross-referenced against the organisational calendar, for weekends and public holidays).
- Calculated overtime amounts are itemised separately on the employee's payslip from basic salary and other allowances.

Validation

- Calculated overtime pay must reconcile exactly with confirmed hours × hourly rate × applicable multiplier for every claim included in a payroll run; any discrepancy blocks the payroll run from proceeding to Computed status.
- Overtime multiplier configuration changes require a recorded change-reason note and are effective-dated.

Workflow

- HoD-confirmed overtime claim → system determines date category from the organisational calendar → applicable multiplier applied → calculated amount itemised and queued for inclusion in the next payroll run.

Error States

- Overtime Calculation Mismatch — "Calculated overtime pay does not reconcile with confirmed hours and the applicable rate. Payroll run is blocked until resolved."
- Missing Multiplier Configuration — "No overtime multiplier is configured for this date category. Configure a multiplier before this claim can be calculated."

Acceptance Criteria

- Given a confirmed overtime claim falls on a public holiday, when the payroll run computes pay, then the system applies the configured public-holiday multiplier automatically.
- Given overtime pay is calculated for a payroll run, when the payslip is generated, then the overtime amount is itemised separately from basic salary and other allowances.

MODULE: Attendance Tracking

SRS-HRM-ATT-01: Capture Clock Events from Biometric, Card & Mobile Devices

User Story

As an HR Officer, I want clock-in/clock-out events captured automatically from biometric, card-reader and mobile devices, so that attendance records are accurate without manual entry.

Requirements

- Clock-in/clock-out events received from ZKTeco, Suprema biometric devices, ID card readers and mobile devices via HTTP POST.
- Each event captures employee ID, timestamp, device ID, location, verification method (fingerprint/face/card/manual), and raw device payload (stored for audit).
- Standard working hours: 8:00 AM–5:00 PM.

Validation

- Raw device data is stored exactly as received and is immutable; corrections are recorded as a separate flagged entry, not an overwrite.

Workflow

- Device sends clock event → system matches employee ID → event stored.

Error States

- Unmatched Device Event — "Clock event received but could not be matched to a known employee ID."
- Duplicate Clock Event — "A clock-in/out event already exists for this employee within this window."

Acceptance Criteria

- Given a biometric device sends a clock-in event, when the system receives it, then the raw payload, employee ID, timestamp, and verification method are stored unchanged.

SRS-HRM-ATT-02: Record Manual & On-Behalf Attendance

User Story

As an HoD, I want to clock attendance on behalf of field-based staff, so that attendance is captured accurately even when biometric devices are unavailable.

Requirements

- HoDs/Managers can clock attendance on behalf of staff on field/off-site assignments; the manager's name is recorded as validator.
- Manual corrections are flagged with a manual-override indicator.

Validation

- A manual entry must record the validating manager's identity distinctly from a device-captured event.

Workflow

- HoD records attendance on behalf of a field-based employee → entry saved with manual-override flag and validator identity.

Error States

- Missing Validator — "A manual attendance entry requires a recorded validating manager."

Acceptance Criteria

- Given a manager clocks attendance on behalf of a field-based employee, when the entry is saved, then the manager's identity is recorded as the validator.

SRS-HRM-ATT-03: Feed Attendance into Performance & Payroll**User Story**

As an HR Officer, I want late arrivals and unpaid leave automatically reflected in performance scoring and payroll, so that downstream modules don't require manual data re-entry.

Requirements

- Late arrivals are tracked and feed into the performance appraisal module as a scoring criterion.
- Unpaid leave is automatically flagged to the payroll module for deductions.

Validation

- Late-arrival and unpaid-leave data passed downstream must reference the same immutable attendance records captured.

Workflow

- Attendance events accumulate → late arrivals surfaced to performance scoring → unpaid leave days flagged to payroll for the relevant pay period.

Error States

- Unmatched Device Event — "Clock event received but could not be matched to a known employee ID."

Acceptance Criteria

- Given an employee has recorded late arrivals in a review period, when the End-of-Year Review scoring screen loads, then late-coming frequency is displayed as a scoring input.
- Given an employee has unpaid leave days in a pay period, when payroll computes, then those days are automatically flagged for deduction.

MODULE: Payroll

SRS-HRM-PAY-01: Compute Payroll Run

User Story

As a Payroll Officer, I want to compute monthly payroll with accurate statutory deductions, so that net pay is calculated correctly for every active employee.

Requirements

- Payroll Officer initiates a monthly payroll run; system computes gross salary, allowances, SSNIT contributions, PAYE tax, and other deductions to arrive at net pay.
- Run validates that all active employees have valid SSNIT numbers, TINs, bank accounts, and current contracts before computation.
- SSNIT contributions calculated on basic salary: Employee Tier 1 - 5.5%, Employer Tier 1 - 13%, Tier 2 - 5% (employee); rates configurable.
- PAYE computed on taxable income (gross pay minus Tier 1 and Tier 2 employee contributions) using GRA progressive tax bands stored in a database table, updatable without code deployment.
- Unpaid leave days and confirmed overtime are automatically included in the computation.

Validation

- Payroll run state machine: Draft → Computing → Computed → Approved → Paying → Paid → Failed; every transition is event-sourced and immutable.

Workflow

- Payroll Officer initiates run → Draft → Computing (validates employee data) → Computed.

Error States

- Missing Statutory Data — "One or more employees are missing a valid SSNIT number, TIN, or bank account. Resolve before computing."
- Overtime Calculation Mismatch — "Calculated overtime pay does not reconcile with confirmed hours and the applicable rate. Payroll run is blocked until resolved."

Acceptance Criteria

- Given a payroll run computes successfully, when it reaches Computed status, then gross pay, SSNIT/Tier 2 deductions, taxable income, and PAYE are calculated for every active employee.

SRS-HRM-PAY-02: Approve Payroll Run (Segregation of Duties)

User Story

As a Payroll Manager, I want payroll approval enforced as a separate action from computation, so that no single person can both compute and approve a payroll run.

Requirements

- The person who computes a payroll run must not be the same person who approves it; computed_by and approved_by must differ — system-enforced, cannot be bypassed.
- Payroll officers cannot access compliance data; HR officers cannot access the payroll panel.

Validation

- This segregation-of-duties rule cannot be overridden by any role, including Administrator.

Workflow

- Run reaches Computed status → a different user reviews and Approves → run moves to Approved status.

Error States

- Segregation of Duties Violation — "The approver cannot be the same person who computed this payroll run."

Acceptance Criteria

- Given a Payroll Officer who computed a run attempts to approve it, when they try to approve, then the system blocks the action.

SRS-HRM-PAY-03: Generate Payslips and Submit Payment Batch**User Story**

As a Payroll Officer, I want payslips generated and a payment batch submitted automatically on approval, so that disbursement proceeds without manual file preparation.

Requirements

- On approval, payslips are generated and stored; payment batch submitted to Payment System with net pay, bank name, account number.
- Each payslip includes basic salary, itemised allowances, gross pay, SSNIT/Tier 2 deductions, taxable income, PAYE, other deductions, overtime, and net pay, accessible via a 15-minute signed URL.
- CAGD payment file can be uploaded for seconded staff paid by government; system detects duplicates. All employees see payroll history in one place regardless of stream.

Validation

- A payslip cannot be generated for a run that has not reached Approved status.

Workflow

- Run Approved → Paying → payslips generated and stored → payment batch submitted to Payment System → Paid, or Failed if submission errors.

Error States

- Payment Submission Failed — "Payment batch submission failed. The payroll officer has been notified."

Acceptance Criteria

- Given a payroll run is approved, when payslips are generated, then each payslip includes basic salary, itemised allowances, gross pay, deductions, overtime, and net pay, accessible via a 15-minute signed URL.

SRS-HRM-PAY-04: Generate Statutory Filings**User Story**

As a Payroll Officer, I want filing-ready SSNIT and GRA PAYE returns generated automatically, so that statutory compliance filing does not require manual recompilation.

Requirements

- System generates filing-ready SSNIT and GRA PAYE returns, and supports annual P9 form generation.

Validation

- Generated filings must reconcile exactly with the underlying Paid payroll run(s) for the filing period.

Workflow

- Payroll run(s) reach Paid status → filing-ready SSNIT and PAYE returns generated for the period → annual P9 forms generated on request.

Error States

- Filing Reconciliation Error — "Generated filing does not reconcile with the underlying payroll run(s) for this period."

Acceptance Criteria

- Given the Auditor-General requests reconstruction of a payroll computation, when the request is made, then the system reproduces the full computation from the immutable event log, including rates applied and approver identity.

SRS-HRM-PAY-05: Generate GHIPSS-Compatible Payroll Export

User Story

As a Payroll Officer, I want to generate a GHIPSS-compatible payroll export file, so that CLET can submit payroll to its payroll processor and to Financial Management System in the required format without manual data transformation.

Requirements

- The system generates a GHIPSS-compatible payroll export file from the computed and approved payroll run, including: employee bank account details, net pay amounts, payment references, and applicable deduction schedules.
- The export file is generated by the 20th of each month for the current month's payroll run, and a reconciliation report is produced comparing the exported totals against the computed payroll run totals.
- The export is transmitted to Financial Management System and Payment System as a structured file via the platform integration layer.

Validation

- The export total must reconcile exactly with the Approved payroll run's net pay total before transmission; any discrepancy blocks export and is surfaced as an error.
- Export can only be generated from a payroll run that has reached Approved status.

Workflow

- Payroll run reaches Approved status → GHIPSS-compatible export generated → reconciliation report produced → export transmitted to Financial Management System and Payment System → transmission confirmed.

Error States

- Export Reconciliation Failure — "The GHIPSS export total does not match the approved payroll run total. Resolve before transmitting."
- Unapproved Run Export Blocked — "A GHIPSS export can only be generated from an Approved payroll run."

Acceptance Criteria

- Given a payroll run is Approved, when the GHIPSS export is generated by the 20th of the month, then the export total reconciles with the run's net pay total and the file is transmitted to Financial Management System and Payment System.

MODULE: Compensation

SRS-HRM-CMP-01: Configure Salary Bands

User Story

As an HR Officer, I want salary bands defined per grade, so that compensation decisions are anchored to a consistent, approved structure.

Requirements

- HR defines salary bands per grade level with minimum, midpoint, and maximum values in GHS; each position's grade maps to a band.
- HR Officers can identify employees whose salary falls outside their grade band.

Validation

- A salary band must have minimum $\leq$ midpoint $\leq$ maximum.

Workflow

- HR defines/updates a salary band for a grade → band becomes the validation reference for merit increases and promotions.

Error States

- Invalid Band Range — "Minimum, midpoint, and maximum values must be in ascending order."

Acceptance Criteria

- Given an HR Officer reviews salary data, when they run the out-of-band check, then employees whose salary falls outside their grade's band are identified.

SRS-HRM-CMP-02: Propose and Approve Merit Increase

User Story

As an HR Officer, I want merit increases validated against grade bands and a budget envelope, so that compensation adjustments stay equitable and within the approved budget.

Requirements

- Following the annual performance cycle, managers propose merit increases; system checks the proposed salary against the employee's grade band automatically.
- Total merit spend is controlled by a budget envelope; the total cost of all proposed increases cannot exceed the approved budget.
- Band adjustments require Board approval.
- Approved compensation changes are effective-dated and automatically reflected in the next payroll run.

Validation

- Out-of-band proposals are flagged for escalation, not silently rejected.
- Budget envelope is enforced system-wide across all proposed increases in a cycle.

Workflow

- Performance cycle completes → manager proposes merit increase → system validates against band and budget → escalation if out-of-band or Grade 15+ → approval → effective-dated change applied to next payroll run.

Error States

- Band Limit Exceeded — "This proposed salary exceeds the maximum for the employee's grade band and requires escalation."
- Budget Envelope Exceeded — "Total proposed increases exceed the approved merit budget for this cycle."

Acceptance Criteria

- Given a manager proposes a merit increase that would exceed the approved budget envelope, when they submit it, then the system blocks the proposal and flags the overage.
- Given a compensation change is approved, when it is submitted, then it is routed for Board approval before becoming effective.

MODULE: Performance Management

SRS-HRM-PRF-01: Publish Organisational Objectives

User Story

As DG/Senior management, I want to publish annual organisational objectives, so that individual goals can cascade from a clear strategic direction.

Requirements

- DG/Senior management publish organisational annual objectives, visible to all staff.
- Goals cascade: Organisation → Directorate → Team → Individual; progress aggregates upward automatically.

Validation

- Only one active set of organisational objectives per annual cycle.

Workflow

- DG/Senior management publishes objectives → objectives become available for goal-setting.

Error States

- (None; publication is an administrative action with no blocking validation beyond single-active-set.)

Acceptance Criteria

- Given organisational objectives are published, when employees begin goal-setting, then the published objectives are available to link individual goals to.

SRS-HRM-PRF-02: Set and Agree Individual Goals

User Story

As an Employee, I want to set individual goals linked to organisational objectives and agree them with my supervisor, so that my performance targets are aligned and approved.

Requirements

- Employees set individual goals linked to at least one organisational objective, with weighted key results.
- Supervisor Discussion stage: refine and agree goals with the employee.
- HoD Approval stage: goals locked once approved.

Validation

- Goals are not locked until HoD approval.
- Each goal must be linked to at least one organisational objective.

Workflow

- Employee sets goal → Supervisor Discussion refines it → HoD Approval locks the goal → goal becomes available for progress tracking.

Error States

- Unlinked Goal — "Each goal must be linked to at least one organisational objective."

- Premature Lock Attempt — "Goals cannot be locked before HoD approval."

Acceptance Criteria

- Given an employee sets a goal not linked to any organisational objective, when they attempt to save it, then the system blocks the save.
- Given a goal has not received HoD approval, when an attempt is made to lock it, then the system blocks the action.

SRS-HRM-PRF-03: Track Goal Progress

User Story

As an Employee/Manager, I want to record and view progress against each key result throughout the year, so that performance appraisal reflects ongoing achievement, not just a single annual snapshot.

Requirements

- Employees and managers can record progress against each key result at any time during the cycle, with a running progress percentage and timestamped progress notes visible on the goal.
- A goal-progress dashboard shows, per employee, per team, and organisation-wide: percentage of goals on track, at risk, or behind, aggregated from individual key-result progress.

Validation

- A goal cannot be adjusted after the Mid-Year Review window closes without HoD approval and a recorded reason, to preserve the integrity of End-of-Year comparison.

Workflow

- Goal locked → progress recorded continuously against key results → progress dashboard updates → cumulative data feeds the Mid-Year and End-of-Year review windows.

Error States

- Goal Adjustment Without Approval — "Goals cannot be adjusted after the Mid-Year window closes without HoD approval."

Acceptance Criteria

- Given a goal-progress dashboard is viewed, when it loads, then it displays the percentage of goals on track, at risk, or behind, aggregated from individual key-result progress.

SRS-HRM-PRF-04: Conduct Mid-Year Review

User Story

As a Supervisor, I want a defined mid-year review checkpoint, so that goal progress is formally reviewed and adjusted if needed before final scoring.

Requirements

- The Mid-Year Review is an independently configurable appraisal window with its own open/close dates and applicable employee scope.

- Mid-Year Review requires a progress narrative and updated completion percentage per key result, and may trigger goal adjustment (renegotiating a key result with HoD approval).
- Mid-Year Review outcomes do not produce a final rating; it is a checkpoint only.

Validation

- An appraisal window cannot be closed while any in-scope employee has not completed its required action (progress narrative), unless explicitly overridden by HR with a logged reason.

Workflow

- Mid-Year window opens → supervisors notified to review progress → progress narrative and updated completion percentage recorded → goal adjustment recorded if needed (with HoD approval) → window closes.

Error States

- Window Closed With Incomplete Actions — "This appraisal window cannot be closed; one or more employees have not completed the required action."

Acceptance Criteria

- Given the Mid-Year Review window opens, when an employee records progress, then a progress narrative and updated completion percentage are captured against each key result without affecting the goal's original target.
- Given a manager attempts to close the Mid-Year window while a direct report has not submitted their progress narrative, when they try, then the system blocks the close unless HR overrides with a logged reason.

SRS-HRM-PRF-05: Configure Additional Appraisal Windows

User Story

As an HR Administrator, I want to configure additional appraisal windows (e.g., quarterly check-ins) beyond Mid-Year and End-of-Year, so that the appraisal cycle can flex to CLET's evolving review cadence without code changes.

Requirements

- HR can configure additional appraisal windows (e.g., quarterly check-ins) within a single annual cycle, each with its own open/close dates, applicable employee scope, and required actions, without requiring a code deployment.

Validation

- A new window's dates must not overlap the Mid-Year or End-of-Year window dates for the same annual cycle.

Workflow

- HR Administrator configures a new window (dates, scope, required action) → window becomes active in the appraisal cycle alongside Mid-Year and End-of-Year.

Error States

- Overlapping Window Dates — "This window's dates overlap an existing appraisal window in this cycle."

Acceptance Criteria

- Given HR configures an additional quarterly check-in window, when the configuration is saved, then the new window becomes part of the active appraisal cycle without requiring a code deployment.

SRS-HRM-PRF-06: Conduct End-of-Year Assessment

User Story

As a Supervisor, I want to score an employee's final performance using the year's accumulated progress data and attendance input, so that the End-of-Year rating is well-supported and fair.

Requirements

- End-of-year scoring uses a configurable scale: Excellent, Above Average, Average, Below Average, Poor.
- Late-coming frequency from the attendance module is automatically pulled in as a scoring criterion.
- The supervisor's scoring screen displays the cumulative progress data recorded throughout the year as supporting evidence for the final score.

Validation

- The End-of-Year window cannot close while any in-scope employee has not received a final score, unless explicitly overridden by HR with a logged reason.

Workflow

- End-of-Year window opens → supervisor scores against key results using cumulative progress data and attendance input → HoD Endorsement stage begins.

Error States

- Window Closed With Incomplete Actions — "This appraisal window cannot be closed; one or more employees have not completed the required action."

Acceptance Criteria

- Given the End-of-Year Review window opens, when the supervisor scores the employee, then attendance late-coming data is automatically displayed as a scoring input.
- Given the End-of-Year Review window opens, when the final assessment is conducted, then the supervisor's scoring screen displays the cumulative progress data recorded throughout the year as supporting context.

SRS-HRM-PRF-07: Endorse Appraisal (HoD, HR, Registrar)

User Story

As an HR Officer, I want appraisal results reviewed and endorsed through HoD, HR, and Registrar stages, so that ratings are consistent, fair, and properly authorised before being finalised.

Requirements

- HoD Endorsement: recommend promote/renew/not recommend.
- HR Review: checked for consistency, fairness, policy compliance; anomalies flagged.
- Registrar Endorsement: final endorsement before DG presentation.

- Approved ratings feed into the Compensation module for merit-increase eligibility (per SRS-HRM-CMP-02) and into promotion nomination where recommended.

Validation

- An appraisal cannot proceed to Registrar Endorsement without a completed HR Review.

Workflow

- End-of-Year scoring complete → HoD Endorsement → HR Review → Registrar Endorsement → result available to Compensation and Promotion modules.

Error States

- Skipped HR Review — "This appraisal cannot proceed to Registrar Endorsement without a completed HR Review."

Acceptance Criteria

- Given an appraisal completes all endorsement stages, when Registrar Endorsement is recorded, then the result is available to the Compensation module for merit-increase eligibility.

MODULE: Training & CPD

SRS-HRM-TRN-01: Configure CPD Pathways

User Story

As an HR Officer, I want to define CPD pathways by role/grade, so that employees know their required professional development obligations.

Requirements

- HR defines CPD pathways by role/grade specifying required training hours per year, mandatory courses, and elective options.
- Mandatory courses for a new role are automatically assigned on hire or role change.

Validation

- A CPD pathway must specify at least a required-hours value before it can be activated.

Workflow

- HR defines a CPD pathway for a role/grade → pathway becomes the reference for automatic mandatory-course assignment on hire/role change.

Error States

- Incomplete Pathway Definition — "A required training hours value is needed before this pathway can be activated."

Acceptance Criteria

- Given an employee changes role, when the change is recorded, then mandatory courses for the new role are automatically assigned per the configured CPD pathway.

SRS-HRM-TRN-02: Schedule and Enrol in Training Sessions

User Story

As an Employee, I want to browse and self-enrol in available training sessions, so that I can complete my CPD requirements flexibly.

Requirements

- Courses categorised as internal, external, mandatory, or elective; sessions scheduled with dates, times, capacity.
- Employees browse and self-enrol in available courses via the ESS portal.

Validation

- Course enrolment cannot exceed defined session capacity.

Workflow

- HR schedules a session (dates, capacity) → employee browses and self-enrols → enrolment confirmed if capacity available.

Error States

- Capacity Exceeded — "This training session has reached its enrolment capacity."

Acceptance Criteria

- Given a training session is at capacity, when an employee attempts to enrol, then the system blocks the enrolment.

SRS-HRM-TRN-03: Record Training Completion and CPD Hours

User Story

As an Employee, I want my CPD hours automatically recorded on course completion, so that I have an accurate, up-to-date record of my professional development.

Requirements

- On completion, CPD hours are automatically recorded; training report uploaded, certificates can be uploaded and linked to the profile.
- Managers view CPD completion status for their team; HR Manager generates training needs analysis reports.

Validation

- Overdue mandatory training alerts are sent to the employee, manager, and HR.

Workflow

- Employee completes enrolled session → CPD hours automatically recorded → Training report & certificate uploaded if applicable → overdue mandatory training triggers alerts.

Error States

- Overdue Mandatory Training — "Mandatory training is overdue for this employee."

Acceptance Criteria

- Given mandatory training becomes overdue, when the due date passes, then alerts are sent to the employee, their manager, and HR.

MODULE: Onboarding

SRS-HRM-ONB-01: Generate Onboarding Checklist and Trigger Provisioning

User Story

As a New Employee, I want a structured onboarding checklist created automatically on hire, so that all setup steps are tracked from day one.

Requirements

- On hire conversion, system auto-creates an onboarding checklist based on role; templates vary by role.
- System immediately requests IT to provision equipment, email, system access, and building badge within seconds of the hire event.
- Document/credential verification is explicitly NOT part of onboarding (handled during recruitment).

Validation

- A checklist must be generated before the employee's Day 1 milestone can begin.

Workflow

- EmployeeHired event fires (conversion or direct entry) → checklist created from the role-based template → IT provisioning triggered.

Error States

- Provisioning Request Failed — "IT provisioning could not be requested. Retry has been queued."

Acceptance Criteria

- Given a new employee record is created via hire conversion, when the event fires, then IT provisioning requests for equipment, email, access, and badge are sent within seconds.

SRS-HRM-ONB-02: Track Onboarding Milestones to Probation Completion

User Story

As a Manager, I want milestone check-ins through a new employee's first 90 days, so that onboarding progress and probation completion are tracked formally.

Requirements

- Milestone check-ins: Day 1 (orientation), Day 7 (first-week check-in), Day 30, Day 60, Day 90 (probation completion assessment).
- Managers receive automated reminders before each check-in; new employees can view and mark their own checklist items complete.
- Overdue tasks escalate as alerts to the HR Manager.
- Probation end date from the contract must align with the Day-90 milestone.

Validation

- Onboarding checklist cannot be marked complete with outstanding mandatory tasks past their due date without escalation.

Workflow

- Checklist created → milestone check-ins occur at Day 1/7/30/60/90 → probation completion assessment at Day 90.
- Probation extension on approval

Error States

- Overdue Onboarding Task — "This onboarding task is overdue and has been escalated to the HR Manager."
- Misaligned Probation Date — "Probation end date does not align with the Day-90 milestone."

Acceptance Criteria

- Given an onboarding task passes its due date unfinished, when the system runs its daily check, then an alert escalates to the HR Manager.

MODULE: Offboarding

SRS-HRM-OFB-01: Generate Offboarding Checklist

User Story

As an HR Officer, I want an offboarding checklist generated automatically when a departure is recorded, so that exit tasks are assigned consistently across departments.

Requirements

- On recording a resignation, termination, or end of secondment, system auto-generates an offboarding checklist and assigns tasks to relevant departments.
- Termination reason is recorded (resignation, dismissal, retirement, end_of_contract, death).

Validation

- A termination reason is required before the offboarding checklist can be generated.

Workflow

- Termination/resignation/secondment-end recorded → offboarding checklist generated and assigned to IT, Facilities, Finance, Library, HR.

Error States

- Missing Termination Reason — "A termination reason is required before offboarding can begin."

Acceptance Criteria

- Given a resignation is recorded, when it is saved, then an offboarding checklist is automatically generated and assigned to the relevant departments.

SRS-HRM-OFB-02: Collect Clearance Sign-Offs

User Story

As an HR Officer, I want clearance sign-offs collected from every relevant department before an employee departs, so that no outstanding obligation is missed.

Requirements

- Clearance requires sign-offs from IT (equipment/access revocation), Facilities (badge/keys), Finance (settlement of advances), Library (materials return), HR (ID card, final documents, handover).
- Employee's manager creates a knowledge transfer plan assigning responsibilities to specific team members.

Validation

- Employee status cannot change from "active" to "alumni" until all clearance sign-offs are completed.

Workflow

- Offboarding checklist generated → clearance sign-offs collected from each department → knowledge transfer plan completed.

Error States

- Incomplete Clearance — "This employee cannot be marked as departed until all clearance sign-offs are received."

Acceptance Criteria

- Given all clearance sign-offs are completed, when the employee's last day is reached, then the employee status can proceed to "alumni".

SRS-HRM-OFB-03: Conduct Exit Interview and Revoke Access

User Story

As an HR Officer, I want an exit interview conducted and all system access revoked on the employee's last day, so that the offboarding process concludes securely and with anonymised feedback captured.

Requirements

- HR conducts a structured exit interview; responses are anonymised before inclusion in workforce analytics.
- On the employee's last day, system automatically revokes all accounts and access across every CLET system with zero delay.

Validation

- Exit interview data must be anonymised before appearing in any analytics view; Board/Heads of Directorate never see individually attributed responses.

Workflow

- Clearance complete → exit interview conducted → last day reached → accounts revoked across all systems → status → "alumni".

Error States

- Revocation Failure — "Account revocation failed for one or more connected systems. Retry has been queued."

Acceptance Criteria

- Given all clearance sign-offs are completed, when the employee's last day is reached, then the system revokes all system accounts and access with zero delay and updates status to "alumni".
- Given an exit interview is recorded, when it is included in workforce analytics, then it appears only as an anonymised aggregate.

MODULE: Dependant Management

SRS-HRM-DEP-01: Add and Maintain Dependant Records

User Story

As an Employee, I want to record and maintain my dependants' details, so that CLET can correctly administer benefits and statutory entitlements that depend on dependant status.

Requirements

- Employees can add, update, and remove dependant records via the ESS portal: full name, relationship (spouse, child, other recognised dependant), date of birth, and supporting document (e.g., marriage or birth certificate).
- A dependant record can be marked inactive (e.g., child reaching age of majority, divorce) without being deleted, preserving history.

Validation

- A dependant marked inactive is excluded from current benefit calculations but remains visible in the employee's history.

Workflow

- Employee adds/updates dependant via ESS portal → record saved → submitted for verification.

Error States

- (None at this stage; document requirement enforced at verification)

Acceptance Criteria

- Given a dependant is marked inactive, when current entitlements are calculated, then that dependant is excluded, while remaining visible in the employee's historical record.

SRS-HRM-DEP-02: Verify Dependant Records

User Story

As an HR Officer, I want to verify dependant records against supporting documentation, so that only confirmed dependants are used for benefit and entitlement calculations.

Requirements

- HR can view and verify dependant records; verification status (Unverified, Verified, Rejected) is HR-managed, not employee-editable.
- Verified dependant records are referenced by other modules where relevant (e.g., next-of-kin on the employee profile, maternity/paternity leave eligibility, health record emergency contacts).

Validation

- Supporting documentation is required before a dependant record can move to Verified status.

Workflow

- Employee adds dependant → HR reviews supporting document → HR marks Verified or Rejected (with reason) → verified dependants become available for reference by other modules.

Error States

- Missing Supporting Document — "A supporting document is required before this dependant record can be verified."
- Unverified Dependant Referenced — "This dependant has not been verified and cannot be used for benefit calculation."

Acceptance Criteria

- Given an employee adds a new dependant without a supporting document, when they attempt to submit, then the system requires the document before submission completes.
- Given HR verifies a dependant record, when verification is saved, then the dependant becomes available for reference in leave and benefit calculations.

MODULE: Health & Medical Records

SRS-HRM-HLT-01: Record Employee Health Information

User Story

As an HR Officer, I want to securely record employee health-related information, so that CLET meets occupational health obligations and supports employees with medical needs.

Requirements

- HR can record, per employee: medical certificates submitted in support of sick leave, pre-employment medical clearance results (recorded during recruitment verification, known allergies or medical conditions relevant to workplace safety (employee-disclosed, optional), emergency medical contact details, and occupational health incident records (workplace injury/illness reports).
- Employees can view and update their own emergency medical contact and voluntarily disclosed conditions through the ESS portal; all other health record entries are HR/Occupational Health Officer-managed and read-only to the employee.

Validation

- Disclosure of medical conditions by the employee is voluntary except where legally or safety required (e.g., roles with specific medical clearance requirements).

Workflow

- Medical certificate uploaded (via leave request) or pre-employment clearance recorded (via recruitment) → stored to the employee's health record.

Error States

- Unauthorized Health Record Access — "You do not have permission to view this employee's health records."

Acceptance Criteria

- Given an employee updates their emergency medical contact via the ESS portal, when it is saved, then the update is reflected on their health record.

SRS-HRM-HLT-02: Secure and Audit Health Record Access

User Story

As a Compliance/Head of HR Directorate, I want health record access tightly restricted and logged, so that this sensitive data is protected consistent with the Data Protection Act.

Requirements

- All health record fields are classified as sensitive personal data under the Data Protection Act 2012 and are encrypted at rest (AES-256), consistent with the protection standard applied to compliance data.
- Access to health records is restricted to HR Officers/Occupational Health Officers explicitly assigned this permission; line managers and other HR roles cannot view health record detail, only an aggregate "fit for duty" status where relevant.
- Every access to a health record is logged (user, timestamp, action), consistent with the audit-logging standard.

Validation

- Line managers are restricted to an aggregate fit-for-duty status; they cannot view health record detail under any role configuration.

Workflow

- A user attempts to access a health record → access scope checked against assigned permission → access granted (and logged) or denied.

Error States

- Unauthorized Health Record Access — "You do not have permission to view this employee's health records."

Acceptance Criteria

- Given a line manager attempts to view an employee's health record detail, when they try to access it, then the system blocks the view and shows only an aggregate fit-for-duty status if applicable.
- Given any health record is accessed, when the access occurs, then it is logged with user, timestamp, and action.

SRS-HRM-HLT-03: Log Workplace Incidents

User Story

As an Occupational Health Officer, I want workplace injury/illness incidents logged formally, so that CLET maintains a safety register for statutory reporting.

Requirements

- Workplace injury/incident reports capture: date, location, description, treatment provided, and follow-up actions; these feed into a compliance/safety register for statutory reporting.

Validation

- An incident report cannot be closed without a recorded follow-up action.

Workflow

- Workplace incident occurs → reported and logged → follow-up action recorded → incident appears in the safety register for periodic statutory reporting.

Error States

- Missing Incident Follow-Up — "This workplace incident report has no recorded follow-up action."

Acceptance Criteria

- Given a workplace injury is reported, when it is recorded, then it appears in the safety register used for statutory reporting.

MODULE: Employee Welfare

SRS-HRM-WEL-01: Submit and Track Welfare Request

User Story

As an Employee, I want to request welfare support, so that CLET can respond to personal circumstances affecting my wellbeing in a structured, confidential way.

Requirements

- Employees can submit a welfare/support request specifying category (financial hardship, bereavement, workplace accommodation, family emergency, other) and a description; supporting documents may be attached.
- Welfare requests route to a designated HR Welfare Officer (or HR Manager where no dedicated role exists) for review and response, distinct from the Compliance module's grievance/disciplinary/speak-up channels.
- Requests follow the workflow: Submitted → Under Review → Action Taken → Closed.
- HR can record support provided (e.g., compassionate leave granted, hardship fund disbursed, accommodation arranged) against the request, linked where applicable to other modules (e.g., a bereavement request may trigger a compassionate leave entry).

Validation

- A welfare request cannot be closed without a recorded support action.

Workflow

- Employee submits welfare request via ESS portal → routed to Welfare Officer/HR Manager → reviewed → support action recorded (and linked to other modules where applicable) → request closed.

Error States

- Missing Action Record — "This welfare request cannot be closed without a recorded support action."

Acceptance Criteria

- Given an employee submits a bereavement welfare request, when HR records compassionate leave as the support action, then the corresponding leave entry is created.
- Given a welfare request has no recorded support action, when HR attempts to close it, then the system blocks the closure.

SRS-HRM-WEL-02: Secure Welfare Request Data

User Story

As an Employee, I want my welfare request details kept confidential, so that only the assigned Welfare Officer can see sensitive personal circumstances.

Requirements

- Welfare request descriptions and supporting documents are treated as sensitive personal data and encrypted at rest, consistent with the protection standard applied to compliance and health data.
- Only the assigned Welfare Officer/HR Manager can view the full detail of a request; other HR roles see only that an open request exists for the employee, not its content.

Validation

- Non-assigned HR roles must never see welfare request content, only existence.

Workflow

- Welfare request submitted → content visible only to the assigned Welfare Officer/HR Manager.

Error States

- Unauthorized Welfare Detail Access — "You do not have permission to view the details of this welfare request."

Acceptance Criteria

- Given an HR Officer without Welfare Officer assignment views the employee's record, when they look for welfare requests, then they see only that an open request exists, not its content.

MODULE: Compliance — Grievance & Disciplinary

SRS-HRM-DSC-01: Manage Grievance Case

User Story

As an Employee, I want to file a grievance and track it through a defined, confidential process, so that my concern is addressed fairly.

Requirements

- Any employee can file a grievance; cases follow: Opened → Investigating → Hearing → Resolved/Escalated/Withdrawn, with deadline tracking per stage.
- The HR Manager (acting in the Compliance function) manages assigned cases, recording findings/outcomes at every step. The HR Manager may delegate case management to a designated HR Officer for a specific case; the delegating HR Manager and the delegated HR Officer are both recorded on the case.

Validation

- Every state transition is recorded as an immutable event for tribunal defensibility.

Workflow

- Employee files grievance → Opened → HR Manager assigns case to themselves or delegates to an HR Officer → Investigating → Hearing → Resolved/Escalated/Withdrawn.

Error States

- Unauthorized Case Access — "You are not assigned to this case and cannot view its details."

Acceptance Criteria

- Given a case undergoes any state transition, when the transition is saved, then an immutable event entry is recorded.
- Given the HR Manager delegates a case to an HR Officer, when the delegation is saved, then both the HR Manager and the HR Officer are recorded as having responsibility on the case.

SRS-HRM-DSC-02: Manage Disciplinary Case

User Story

As an HR Manager, I want disciplinary cases processed through a formal sanctions ladder, so that outcomes are consistent, defensible, and appealable.

Requirements

- Disciplinary process follows a formal sanctions ladder: (1) HoD files complaint, (2) Employee responds in writing, (3) Investigation by a constituted committee (membership, dates, findings recorded), (4) Sanctions ladder — Reprimand, 1st Written Warning, 2nd Written Warning, Suspension, Termination, (5) Appeal available at each stage.
- Full disciplinary history per employee is maintained and visible when considering escalation.
- The HR Manager manages the disciplinary process and may delegate case management to a designated HR Officer; both are recorded on the case.

Validation

- A sanction cannot be applied without a completed investigation record (committee, dates, findings).

Workflow

- HoD Complaint → Employee Response → Investigation → Sanction (per ladder) → Appeal (optional, at any stage).

Error States

- Missing Investigation Record — "An investigation record (committee, dates, findings) is required before a sanction can be applied."

Acceptance Criteria

- Given a disciplinary sanction is applied, when it is recorded, then it becomes visible in the employee's full disciplinary history for future escalation decisions.

SRS-HRM-DSC-03: Restrict and Audit Case Access**User Story**

As an HR Manager, I want compliance case access restricted by assignment and fully logged, so that sensitive grievance and disciplinary data stays confidential and defensible.

Requirements

- Grievance and disciplinary descriptions/allegations/sanction details are encrypted at rest (AES-256); encryption key rotated quarterly.
- The HR Manager has access to all compliance cases within their assigned scope (organisation-wide for a senior HR Manager, or directorate-scoped for a directorate-level HR Manager). A delegated HR Officer sees only the specific cases delegated to them.
- Database-level row-level security enforces this scope: the HR Manager role sees rows matching their assigned directorate scope; a delegated HR Officer sees only their explicitly assigned case rows.
- Every page view within the compliance area is logged (user, timestamp, resource type/ID, action) and forwarded to the central Audit Logging System.

Validation

- Row-level security must be enforced at the database layer, not application layer alone.
- A delegated HR Officer's access to a specific case must be explicitly granted by the HR Manager and is automatically revoked when the case is closed or the delegation is withdrawn.

Workflow

- A user attempts to view a case → row-level security evaluates their role and assignment scope → access granted (and logged) or denied.

Error States

- Unauthorized Case Access — "You are not assigned to this case and cannot view its details."

Acceptance Criteria

- Given an HR Officer without case delegation attempts to view a compliance case, when they try to access it, then the system blocks the view and logs the attempt.
- Given an HR Manager is directorate-scoped, when they view the compliance case list, then they see only cases within their assigned directorate.

SRS-HRM-DSC-04: Submit Anonymous Speak-Up Report

User Story

As an Employee, I want to anonymously report concerns about misconduct, fraud, or safety, so that I can raise issues without fear of identification or retaliation.

Requirements

- Employees submit reports with category (fraud, corruption, safety, harassment, retaliation, other), description, and optional evidence file uploads.
- Default submission mode is anonymous; reporter identity field is not pre-populated and is clearly optional.

Validation

- No identifying information about an anonymous reporter is stored unless the reporter explicitly chooses to identify themselves.
- Evidence files are stored in an encrypted bucket with access logging.

Workflow

- Employee submits report (anonymous by default) → report enters triage.

Error States

- Accidental Identity Capture — "Reporter identity fields must remain optional and cannot be made mandatory for Speak-Up submissions."

Acceptance Criteria

- Given an employee submits a Speak-Up report without identifying themselves, when the report is saved, then no identifying information is stored.

SRS-HRM-DSC-05: Triage and Refer Speak-Up Report

User Story

As an HR Manager, I want Speak-Up reports triaged and, where needed, referred to the Ethics CMS, so that serious concerns reach the appropriate investigation channel.

Requirements

- The HR Manager triages Speak-Up reports: Received → Triaging → Investigating → Resolved → Referred to Ethics. The HR Manager may delegate triage of a specific report to a designated HR Officer; both are recorded on the report.
- Reports referred to ethics link to the C&A Investigation CMS (S192).

Validation

- All compliance data access for Speak-Up reports is logged; an HR Officer sees only the reports explicitly delegated to them.

Workflow

- Report submitted → HR Manager triages (or delegates to HR Officer) → Investigation → Resolution or Referral to Ethics.

Error States

- Referral Link Failure — "This report could not be linked to the C&A Investigation CMS. Referral will be retried automatically."

Acceptance Criteria

- Given the HR Manager delegates triage of a report to an HR Officer, when the delegation is saved, then the HR Officer sees the report in their queue and the HR Manager remains the accountable owner.

MODULE: Analytics & Reporting

SRS-HRM-ANL-01: Provide Workforce Dashboard & DEI Snapshot

User Story

As a Head of Directorate/DG, I want workforce and DEI dashboards, so that I can make informed workforce planning decisions appropriate to my role's scope.

Requirements

- Workforce dashboard: headcount by directorate, contract type, grade level; vacant positions visible.
- Attrition reports: rolling 12-month view by directorate, grade, and length of service; replacement timeline tracking.
- DEI snapshot: gender distribution, disability representation, age distribution, pay equity ratios.
- Role-based data access: DG sees all data; Heads of Directorate see their directorate only; Managers see their direct team only.

Validation

- Any DEI metric where group size is fewer than 3 people is automatically suppressed to protect privacy.
- Individual employee pay data is never exposed in DEI views — only aggregated averages per grade/gender cell.

Workflow

- Dashboard requested → data aggregated per the viewer's role-based scope → DEI cells under the suppression threshold hidden.

Error States

- Suppressed Metric — "This metric is suppressed because the underlying group size is fewer than 3 to protect individual privacy."
- Unauthorized Scope Access — "You do not have permission to view data outside your assigned directorate/team."

Acceptance Criteria

- Given a DEI metric group contains fewer than 3 people, when the dashboard renders, then that cell is suppressed rather than displayed.
- Given a Head of Directorate views the workforce dashboard, when data loads, then only their own directorate's data is shown.

SRS-HRM-ANL-02: Generate Board HR Pack

User Story

As a Board Member, I want a quarterly auto-generated HR pack, so that I have a concise, privacy-respecting summary of workforce status for governance purposes.

Requirements

- Board HR Pack: quarterly, auto-generated PDF — headcount summary, attrition trends, anonymised compliance aggregates, DEI snapshot, key workforce metrics; downloadable from the portal.

Validation

- The Board HR Pack must contain only anonymised aggregate compliance data, with no individual case details.

Workflow

- Quarter-end → system aggregates workforce, attrition, compliance, and DEI data → Board HR Pack generated as PDF → made available for download to Board members.

Error States

- Suppressed Metric — "This metric is suppressed because the underlying group size is fewer than 3 to protect individual privacy."

Acceptance Criteria

- Given the quarter ends, when the Board HR Pack is generated, then it contains only anonymised aggregate compliance data, with no individual case details.

SRS-HRM-ANL-03: Provide Pre-Defined Reports**User Story**

As an HR Manager, I want a library of pre-defined reports, so that I can obtain common workforce information without ad hoc development requests.

Requirements

- The system provides a library of pre-defined reports covering each module, including (but not limited to): headcount by directorate/grade/contract type, attrition and tenure, leave balance and utilisation by employee/directorate, training/CPD completion status, payroll summary (gross/net/deductions by directorate), appraisal completion and rating distribution, vacancy and time-to-hire, and compliance case volume by category (anonymised aggregate only).
- Pre-defined report output can be viewed on screen or exported (CSV, PDF, Excel).

Validation

- Pre-defined reports respect the same row-level and field-level access restrictions as the underlying data.

Workflow

- User selects a pre-defined report → system applies the user's access scope → report generated → viewed or exported.

Error States

- Field Outside Access Scope — "One or more fields in this report are outside your authorised data access scope and have been excluded."

Acceptance Criteria

- Given a user runs a pre-defined leave utilisation report, when it generates, then it can be exported as CSV, PDF, or Excel.

SRS-HRM-ANL-04: Build Customised Reports**User Story**

As a Head of Directorate, I want to build a customised report from available data domains, so that I can answer specific questions without depending on a pre-defined report.

Requirements

- Authorised users can build a customised report by selecting a data domain, choosing fields, applying filters (date range, directorate, grade, employee status), and choosing a grouping/aggregation.
- Custom report definitions can be saved and re-run, and optionally shared with other users within the creator's permission scope.
- Custom reports can be scheduled for recurring delivery via the Communications module.

Validation

- A custom report cannot be built or exported with field/filter combinations that would expose data outside the requesting user's authorised scope; such fields are not selectable, not merely hidden after the fact.
- DEI and compliance-related custom reports are subject to the same small-group suppression rule defined

Workflow

- User selects domain, fields, filters, grouping → system enforces access scope on selectable fields → report generated → viewed, exported, or scheduled for recurring delivery.

Error States

- Field Outside Access Scope — "One or more selected fields are outside your authorised data access scope and cannot be included."
- Suppressed Aggregate — "This report contains a group smaller than the minimum reporting threshold and has been suppressed for privacy."

Acceptance Criteria

- Given a Head of Directorate builds a custom headcount report, when they select fields and filters, then only fields and directorate scopes within their own directorate are selectable.
- Given a custom report is scheduled for recurring delivery, when the schedule triggers, then the report is generated and delivered via the Communications module to the configured recipients.

SRS-HRM-ENG-01: Deploy Engagement Surveys

User Story

As an HR Manager, I want to deploy anonymous engagement surveys, so that leadership can track organisational engagement over time.

Requirements

- HR can deploy pulse surveys, full annual surveys, or custom surveys; all surveys are anonymous.
- System automatically calculates eNPS (Employee Net Promoter Score) from survey responses.
- Heads of Directorate can view their directorate's engagement scores compared to the organisation average.

Validation

- If fewer than 5 people respond in a particular group, responses are not shown separately, to prevent identification.

Workflow

- Survey deployed → responses collected anonymously → eNPS calculated → results surfaced to Heads of Directorate (org-average comparison) and HR Manager (full analytics).

Error States

- Insufficient Response Group — "This group has fewer than 5 responses and cannot be shown separately."

Acceptance Criteria

- Given a survey group receives fewer than 5 responses, when results are displayed, then that group's data is not broken out separately.
- Given survey responses are collected, when the survey closes, then the system automatically calculates and displays the eNPS score.

SRS-HRM-ENG-02: Generate Workforce Plans**User Story**

As an HR Manager, I want to model workforce scenarios, so that leadership can plan headcount needs proactively.

Requirements

- HR Manager can generate workforce plans with headcount projections and skill gap analysis, including scenario modelling (e.g., 10% attrition increase, 15-staff growth).

Validation

- Scenario models must be based on current headcount and attrition data, not manually re-entered figures.

Workflow

- HR Manager selects a scenario parameter (e.g., attrition increase %) → system models projected headcount and skill gaps based on current data.

Error States

- (None blocking; modelling tool with no transactional state.)

Acceptance Criteria

- Given an HR Manager runs a workforce scenario model, when the model completes, then projected headcount and skill gap analysis are displayed based on current workforce data.

MODULE: Communications & Staff Portal

SRS-HRM-COM-01: Compose and Send Targeted Messages

User Story

As an HR Manager, I want to send targeted messages to staff through multiple channels, so that communications reach the right people reliably.

Requirements

- HR Manager/authorised officers compose messages with subject, body, and priority (normal/high) to targeted recipients: all staff, a directorate, an org unit, a role group, an individual, or a custom filter.
- Messages delivered via in-app notification, email, and SMS (critical/emergency — Phase 2); sender selects channels.
- Reusable message templates support variable substitution (e.g., employee name, contract end date).

Validation

- Messages cannot be edited after sending.
- Every message is logged with sender, recipients, timestamp, channel, and delivery status.

Workflow

- Compose message → select recipients and channels → send → delivery logged.

Error States

- Post-Send Edit Blocked — "Messages cannot be edited after they have been sent."
- Delivery Failure — "This message failed to deliver via [channel]. See delivery log for details."

Acceptance Criteria

- Given a message is sent, when the sender attempts to edit it afterward, then the system blocks the edit.

SRS-HRM-COM-02: Display High-Priority Banner Notifications

User Story

As an Employee, I want high-priority messages to display prominently until acknowledged, so that I don't miss critical organisational communications.

Requirements

- High-priority messages from DG/Registrar display as a banner alert on next login, remaining visible until acknowledged.
- Employees view all messages sent to them in a notification centre.

Validation

- A high-priority banner must persist across sessions until explicitly acknowledged by the employee.

Workflow

- High-priority message sent → on the recipient's next login, banner displays → remains until acknowledged.

Error States

- (None additional beyond Delivery Failure inherit)

Acceptance Criteria

- Given a high-priority message is sent by the DG, when the recipient next logs in, then it displays as a banner alert until acknowledged.

SRS-HRM-POR-01: Provide Pre-Login Staff Landing Page

User Story

As a Visitor/Employee, I want to see news, events, and announcements without logging in, so that general information is accessible immediately.

Requirements

- Pre-login (public-facing) landing page shows news, upcoming events, event flyers, and general announcements without requiring login.
- Photo gallery/social corner allows HR to upload photos from staff events.

Validation

- No employee-specific or sensitive data is shown on the pre-login landing page.

Workflow

- HR publishes news/event/photo content → content appears on the pre-login landing page.

Error States

- (None; public content has no access restriction to enforce.)

Acceptance Criteria

- Given a visitor navigates to the staff portal URL without logging in, when the page loads, then they see news, events, flyers, and announcements.

SRS-HRM-POR-02: Maintain Policy Document Repository

User Story

As an Employee, I want to view and download HR policy documents, so that I can reference current policy without contacting HR.

Requirements

- Policy documents are viewable/downloadable, grouped by category (e.g., Conditions of Service, Employee Manual, Disciplinary Procedures, Leave Policy); uploaded as PDFs by HR, accessible to all staff.

Validation

- Policy documents must be categorised before publishing; uncategorised documents cannot be published to the repository.

Workflow

- HR uploads a policy document and assigns a category → document published to the repository.

Error States

- Uncategorized Document — "This policy document must be assigned a category before it can be published."

Acceptance Criteria

- Given the leave policy is updated, when an employee views the policy repository, then the current version is shown.

SRS-HRM-POR-03: Manage Organisational Calendar

User Story

As an HR Officer, I want to add organisational calendar events with automatic notifications, so that staff are reminded of public holidays, deadlines, and events without manual SMS sending.

Requirements

- HR adds events (public holidays, birthdays, training dates, deadlines); system sends SMS and email notifications to all or selected staff on the day, replacing the prior SMS-based reminder system.
- The calendar integrates with the organisational leave calendar so leave and events are visible together.

Validation

- An event must have a date and recipient scope before it can be saved.

Workflow

- HR creates a calendar event → on the event date, SMS and email notifications are sent automatically to all or selected staff.

Error States

- Notification Send Failure — "Calendar event notification failed to send to one or more recipients. Retry queued."

Acceptance Criteria

- Given a calendar event is scheduled, when the event date arrives, then SMS and email notifications are sent automatically to all or selected staff.

MODULE: Reward & Recognition

SRS-HRM-RWD-01: Nominate and Vote for Awards

User Story

As an Employee, I want to nominate and vote for colleagues in defined award categories, so that recognition is transparent and staff-driven.

Requirements

- HR defines award categories (e.g., Employee of the Year, Best Team Player).
- Employees can nominate colleagues and vote within open categories.

Validation

- An employee cannot nominate or vote for themselves.
- Voting is only open within the configured nomination/voting window for each category.

Workflow

- HR opens category → employees nominate → voting window opens → voting closes → winners determined.

Error States

- Self-Nomination Blocked — "You cannot nominate yourself for this award category."
- Voting Window Closed — "Voting for this category is closed."

Acceptance Criteria

- Given an employee attempts to nominate themselves, when they submit, then the system blocks the nomination.

SRS-HRM-RWD-02: Announce Award Winners

User Story

As an HR Officer, I want award winners announced automatically through the Communications module, so that recognition reaches all staff without a manual announcement step.

Requirements

- Winners are announced through the Communications module once voting closes.

Validation

- An announcement cannot be sent before the voting window for that category has closed.

Workflow

- Voting window closes → winners determined → announcement sent via the Communications module.

Error States

- Voting Window Closed — "Voting for this category is closed."

Acceptance Criteria

- Given the voting window closes, when winners are determined, then the announcement is automatically sent via the Communications module.

MODULE: Identity & Access Integration

SRS-HRM-IAM-01: Provision IAM Account on Employee Hire

User Story

As a System Administrator, I want an employee's hire to automatically create a corresponding user account in the integrated IAM system, so that the employee can immediately authenticate without manual account-creation.

Requirements

- The system exposes a SCIM 2.0 endpoint supporting POST (create) for identity synchronisation with the IAM system (Keycloak).
- The EmployeeHired event — fired when an employee record becomes active, whether via applicant-to-employee conversion or direct HR Officer entry (e.g., secondment acceptance) — automatically triggers a SCIM POST to the IAM system, creating a corresponding IAM user account.
- A record in a non-active state (e.g., pending verification, pending start date) does not trigger IAM provisioning; provisioning occurs only at the point of hire/activation.
- The SCIM create payload includes the attributes the IAM system requires to provision the account: employee number, full name, work email, directorate/org unit, and role/position — sufficient for the IAM system to enable login, MFA enrolment, and self-service change-password/forgotten-password flows.
- SCIM endpoint authenticated via a dedicated system-to-system bearer token (not end-user login), rotated monthly and stored securely.
- The HR Platform itself does not provide user account creation, login, MFA enrolment, forgotten-password, change-password, or logout screens; these functions are delivered entirely by the IAM system.

Validation

- An employee record cannot be marked "active" until the IAM account-creation SCIM call has succeeded; a failed call blocks activation and surfaces an error to the creating HR Officer.
- Each employee record stores the linked IAM user account identifier (returned by the IAM system on creation) to ensure a 1:1, traceable mapping.

Workflow

- EmployeeHired event fires (recruitment conversion or direct entry) → SCIM POST sent to IAM system → IAM user account created → IAM-issued user ID stored back on the employee record.

Error States

- IAM Account Creation Failed — "The IAM user account for this employee could not be created. Employee activation is blocked until this is resolved."
- Unauthorized SCIM Request — "This request could not be authenticated. Check the system-to-system token."
- Unlinked Employee Record — "This employee record has no linked IAM user account and cannot be activated."

Acceptance Criteria

- Given the EmployeeHired event fires (via recruitment conversion or direct HR entry), when the event is recorded, then a SCIM POST is sent to the IAM system and a corresponding IAM user account is created, enabling the employee to log in, enrol in MFA, and use change-password/forgotten-password functions.
- Given the SCIM account-creation call fails, when the failure occurs, then the employee record is blocked from becoming "active" and the HR Officer is shown the IAM Account Creation Failed error.
- Given a user needs to log in, enrol in MFA, change their password, or reset a forgotten password, when they attempt this, then they are directed entirely to the IAM system; the HR Platform performs none of these functions itself.

SRS-HRM-IAM-02: Update and Deactivate IAM Account

User Story

As a System Administrator, I want IAM account attributes kept current and access revoked on termination, so that identity stays synchronised through the employee's full lifecycle.

Requirements

- The SCIM endpoint additionally supports GET/{id}, PUT/{id}, PATCH/{id}, and DELETE/{id} (deactivate).
- Subsequent updates to an employee's record (e.g., name change, directorate transfer, role change) trigger a SCIM PUT/PATCH to keep the IAM user account attributes current.
- EmployeeTerminated events (and at the end of secondment without extension) trigger a SCIM DELETE/deactivate, revoking the IAM user account and all associated access.

Validation

- Identity sync payloads must match the SCIM 2.0 schema; malformed payloads are rejected and logged.
- A failed SCIM push is retried automatically per the standard webhook retry schedule; repeated failures are escalated for manual intervention.

Workflow

- Employee record updated (role, name, directorate) → SCIM PUT/PATCH sent → IAM account attributes updated.
- EmployeeTerminated event recorded (or last day reached) → SCIM DELETE/deactivate sent → IAM account deactivated, login/MFA/password access revoked with zero delay.

Error States

- SCIM Sync Failed — "Identity synchronisation to the IAM system failed. Retry has been queued."

Acceptance Criteria

- Given an employee's role or directorate changes, when the change is saved, then the corresponding IAM user account attributes are updated via SCIM.
- Given an employee's last day is reached, when offboarding completes, then a SCIM deactivation request is sent to the IAM system with zero delay, revoking login, MFA, and password-reset access.

MODULE: Platform Integration

SRS-HRM-INTG-01: Publish Lifecycle Event Webhooks

User Story

As a DTI Engineer, I want employee lifecycle events published reliably to all subscribing CLET systems, so that downstream systems stay synchronised without manual notification.

Requirements

- System publishes signed HTTP webhooks for events including: employee.hired, employee.terminated, employee.transferred, employee.promoted, contract.changed, leave.approved, payroll.run.computed, payroll.run.paid, grievance.opened, disciplinary.concluded.
- Each webhook includes an HMAC-SHA256 signature (X-CLET-Signature header) for consumer payload verification.

Validation

- Webhook payloads are retained for 90 days.

Workflow

- Lifecycle event occurs → webhook payload signed and sent to all active subscribers for that event type.

Error States

- Invalid Signature — "Payload signature could not be verified by the consuming system." (Logged for diagnostics.)

Acceptance Criteria

- Given an employee.hired event occurs, when it is published, then all active subscribers for that event type receive a signed webhook with a valid HMAC-SHA256 signature.

SRS-HRM-INTG-02: Manage Webhook Subscriptions and Retry Failed Deliveries

User Story

As a System Administrator, I want to manage webhook subscriptions and have failed deliveries retried automatically, so that downstream system onboarding requires no code deployment and transient failures self-heal.

Requirements

- Authorised users/administrators can register webhook subscriptions: subscribing system name, event type(s), HTTPS endpoint, shared secret; subscriptions are toggleable without deletion.
- Adding a new subscribing system requires only a database configuration entry — no code deployment.

Validation

- Failed webhook deliveries are retried with exponential backoff: 30 seconds, 2 minutes, 8 minutes, 32 minutes, 2 hours (5 attempts total).
- Each delivery attempt is logged with status code, error message, and timestamp; after 5 failures, delivery is marked permanently failed and surfaced for manual intervention.

Workflow

- Delivery attempt fails → retried per the backoff schedule → permanent failure surfaced after 5 attempts.

Error States

- Webhook Delivery Failed — "Delivery to [system] failed after 5 attempts and requires manual review."

Acceptance Criteria

- Given a webhook delivery fails, when the system retries per the backoff schedule and all 5 attempts fail, then the delivery is marked permanently failed and visible for manual intervention.
- Given a new system needs to subscribe to HR events, when an administrator adds the subscription via configuration, then no code deployment is required.

SRS-HRM-INTG-03: Expose On-Demand Query API**User Story**

As a DTI Engineer, I want other CLET systems to query HR data on demand via authenticated REST APIs, so that they don't need to wait for an event to access current data.

Requirements

- System exposes authenticated REST endpoints for other CLET systems to query HR data on demand (employee list/detail, employment status, org-unit hierarchy, clock-event ingestion).

Validation

- All inbound REST API requests require a valid system-to-system API key.

Workflow

- Subscribing system calls a REST endpoint with a valid API key → HR data returned per the endpoint's defined scope.

Error States

- Unauthorized API Request — "A valid system-to-system API key is required to access this endpoint."

Acceptance Criteria

- Given a request is made to a REST endpoint without a valid API key, when the request is received, then the system rejects it.

MODULE: Employee Self-Service Portal

SRS-HRM-PRT-01: Provide Consolidated Self-Service Dashboard

User Story

As an Employee, I want a single dashboard summarising my open HR items, so that I can see what needs my attention without navigating each module separately.

Requirements

- The Employee Self-Service (ESS) portal is the single post-login destination through which an employee accesses every employee-facing capability defined across this SRS: profile, leave, overtime, payslips, goals/appraisal, CPD, onboarding tasks, dependants, qualifications, grievances, Speak-Up, welfare, engagement surveys, messages, policy/calendar and Reward & Recognition.
- The portal provides a single dashboard view summarising the employee's open items: pending leave requests, outstanding onboarding tasks, overdue mandatory training, unread high-priority messages, and current appraisal stage.

Validation

- All data displayed in the ESS dashboard must reflect the live, current state of the underlying module (no caching beyond a reasonable refresh interval that could show stale balances or statuses).

Workflow

- Employee authenticates via IAM → ESS portal loads dashboard aggregating open items from all modules.

Error States

- Module Unavailable — "This service is temporarily unavailable. Please try again shortly."

Acceptance Criteria

- Given an employee logs into the ESS portal, when the dashboard loads, then it displays a consolidated summary of their pending leave requests, outstanding onboarding tasks, overdue training, unread high-priority messages, and current appraisal stage.

SRS-HRM-PRT-02: Enforce Self-Service Access Scope

User Story

As an Employee, I want to be confident the ESS portal only ever shows my own data (or my team's, if I'm a manager), so that my personal HR information stays private.

Requirements

- The ESS portal authenticates the employee via the IAM system; the HR Platform performs no authentication of its own.
- Each employee sees only their own data and the team/directorate data their role entitles them to (e.g., a line manager sees their direct reports' pending leave requests).
- All self-service actions performed by the employee are subject to the same validation, workflow, and audit-logging rules defined in their respective module requirements; the ESS portal introduces no separate or weaker validation path.

Validation

- An employee cannot access another employee's self-service data through the portal, regardless of role, except where explicitly defined (e.g., a manager's view of direct reports' leave requests).

Workflow

- Employee navigates to a module-area within the ESS portal → access scope enforced per their role → action processed by the owning module per its own requirements.

Error States

- Unauthorized Data Access — "You do not have permission to view this employee's information."

Acceptance Criteria

- Given an employee attempts to access another employee's payslip or profile through the portal, when the request is made, then the system blocks access.
- Given an employee submits a leave request through the ESS portal, when it is submitted, then it is processed under the exact same workflow, validation, and audit rules defined.

MODULE: Platform Standards & Non-Functional Controls

SRS-HRM-STD-01: Enforce Shared Employee Identity

User Story

As a Director of DTI, I want every module to reference the same employee identity, so that the platform behaves as one system rather than disconnected tools.

Requirements

- All modules use a single, shared employee identity (the Core HRMS employee record and its UUID/employee ID) as the sole reference for "employee" across the platform; no module maintains its own separate employee list.
- All inter-module data references (e.g., a leave request referencing an employee, a payroll run referencing a contract) use the same identifier scheme and referential integrity rules platform-wide.

Validation

- A new module or feature added to the platform must reuse the existing employee identity rather than introducing a parallel implementation.

Workflow

- New module/feature proposed → checked for reuse of the existing employee identity → DTI Engineering approval required for any deviation.

Error States

- Non-Standard Identity Reference — "This module references employees using a non-standard identifier and cannot be deployed."

Acceptance Criteria

- Given a new module is added to the platform, when it needs to identify an employee, then it references the existing Core HRMS employee UUID rather than creating its own employee list.

SRS-HRM-STD-02: Enforce Shared Configuration & Notification Standards

User Story

As a Director of DTI, I want policy values and notification delivery handled by shared, reusable mechanisms, so that updates apply consistently and the platform stays maintainable.

Requirements

- Status values, approval-stage labels, and workflow state names are defined once in a shared reference/configuration set and reused consistently across modules.
- Configuration values that vary by policy (leave entitlements, SSNIT/PAYE rates, overtime rates, CPD hour requirements, salary bands) are stored in shared, database-driven configuration tables, updatable by authorised administrators without code deployment.
- A common notification-delivery mechanism (in-app, email, SMS) is shared across all modules that send notifications, rather than each module implementing separate delivery logic.

- A common set of UI patterns is applied platform-wide: consistent navigation, notification/banner presentation, file-upload/download behaviour, and a single design system for the ESS portal and administrative panels.

Validation

- Any proposed deviation from a shared standard (data definition, workflow label, UI pattern) requires sign-off from the DTI Engineering lead before implementation.

Workflow

- New module/feature proposed → checked against existing shared standards (configuration, notifications, UI patterns) → reused where a standard exists → DTI Engineering approval required for any deviation.

Error States

- Unapproved Deviation — "This deviates from platform UI/workflow standards and requires DTI Engineering sign-off before release."

Acceptance Criteria

- Given a policy value such as a leave entitlement or SSNIT rate changes, when an administrator updates the shared configuration table, then the change applies consistently across every module that uses that value, without code deployment.

SRS-HRM-STD-03: Enforce Shared Audit-Logging Mechanism

User Story

As a Director of DTI, I want a single, shared audit-logging mechanism used by every module, so that audit data is consistent, complete, and reconstructable platform-wide.

Requirements

- A common audit-logging mechanism (actor, timestamp, before/after, action) is applied uniformly to every module that records a change, rather than each module implementing its own ad hoc logging.

Validation

- A new module must reuse the shared audit-logging mechanism rather than introducing a parallel implementation.

Workflow

- Any module records a change → the shared audit-logging mechanism captures actor, timestamp, action, and before/after values.

Error States

- Non-Standard Identity Reference — "This module references employees using a non-standard identifier and cannot be deployed."

Acceptance Criteria

- Given any module records a change to data, when the change is saved, then it is captured using the single shared audit-logging mechanism in the same format as every other module.

SRS-HRM-SCY-01: Encrypt Sensitive Data at Rest

User Story

As a Director of DTI, I want sensitive personal and case data encrypted at rest, so that CLET protects employee privacy and meets statutory data protection obligations.

Requirements

- All description/allegation/sanction fields in compliance tables are encrypted at rest (AES-256); encryption key stored securely and rotated quarterly.
- Health record fields and welfare request fields follow the same encryption standard.

Validation

- A DPIA (Data Protection Impact Assessment) must be completed for each module before deployment.

Workflow

- Sensitive data write → encrypted at application layer before storage.

Error States

- Encryption Key Unavailable — "This record could not be decrypted. Contact System Administrator."
- DPIA Incomplete — "This module cannot go live until its Data Protection Impact Assessment is completed."

Acceptance Criteria

- Given a developer with direct database access queries a compliance table, when they attempt to read sensitive fields, then the data is unreadable without the application-layer decryption key.

SRS-HRM-SCY-02: Enforce Row-Level Security and Central Audit Forwarding

User Story

As a Director of DTI, I want database-level row-level security and centralised audit forwarding for sensitive modules, so that access control is enforced even against direct database queries.

Requirements

- Row-Level Security (RLS) is enabled on grievance, disciplinary, speak-up, and health record tables, restricting direct database access to assigned rows only; application-level scopes provide defence-in-depth, not the sole control.
- Every page view within the Compliance area is logged (user, timestamp, resource type/ID, action) and forwarded to the central Audit Logging System.

Validation

- RLS must be enforced at the database layer; application-layer scoping alone is insufficient.

Workflow

- RLS evaluates access on every query → access/action logged to central Audit Logging System.

Error States

- RLS Access Denied — "You do not have row-level access to this record."

Acceptance Criteria

- Given a developer with direct PostgreSQL access queries a compliance table, when RLS is evaluated, then only rows assigned to their identity are returned.

SRS-HRM-SCY-03: Record Immutable Audit Events for Critical Actions

User Story

As a Director of DTI, I want critical lifecycle and payroll events recorded as immutable events, so that the platform remains fully reconstructable for the Auditor-General.

Requirements

- Critical events (hire, transfer, promotion, secondment change, payroll actions) are recorded as immutable, append-only stored events (event sourcing), capturing actor ID, IP address, user agent, and timestamp.
- The audit trail must be permanent, non-deletable, and reconstructable even after database corruption.

Validation

- No role, including Administrator, can delete or modify an immutable audit event.

Workflow

- Critical event occurs → immutable event recorded with actor, IP, user agent, and timestamp.

Error States

- (None; immutability is enforced architecturally, not via a blockable user action.)

Acceptance Criteria

- Given any lifecycle or payroll event occurs, when it is recorded, then it is stored as an immutable event capturing actor, IP, user agent, and timestamp, and cannot subsequently be altered or deleted.

SRS-HRM-SCY-04: Comply with Statutory Data Protection and Filing Requirements

User Story

As a Director of DTI, I want the platform to satisfy Ghana's statutory data protection, pension, and tax legislation, so that CLET remains compliant and auditable.

Requirements

- The system must comply with the Ghana Data Protection Act 2012 (Act 843): lawful basis for processing, data minimisation, purpose limitation, accuracy, storage limitation, integrity, confidentiality, and data subject rights (access, rectification, erasure where applicable).
- Payroll computations must satisfy SSNIT Act 2008 (Act 766) and Revenue Administration Act 2016 (Act 915) accuracy requirements and remain fully reconstructable for the Auditor-General.
- Decentralised HR operations (directorate-scoped HR Officer access) must be configurable without code changes.

Validation

- Statutory configuration values (SSNIT rates, PAYE bands, Labour Act leave minimums) must be updatable without code deployment as legislation changes.

Workflow

- Legislation changes → authorised administrator updates the relevant statutory configuration table → change applies platform-wide going forward.

Error States

- Below Statutory Minimum — "This entitlement value is below the Ghana Labour Act minimum and cannot be saved."
- Missing Statutory Data — "One or more employees are missing a valid SSNIT number, TIN, or bank account. Resolve before computing."

Acceptance Criteria

- Given the Auditor-General requests reconstruction of a payroll computation, when the request is made, then the system reproduces the full computation from the immutable event log, including rates applied and approver identity.

MODULE: Statutory Appointments & Personnel Tracks

SRS-HRM-APT-01: Maintain Separate Personnel Tracks

User Story

As an HR Officer, I want the system to maintain distinct personnel tracks for each category of person associated with CLET, so that the appropriate fields, approval workflows, contract types, and access permissions apply to each category without cross-contamination.

Requirements

- The system maintains the following distinct personnel tracks, each with its own fields, workflow, and access scope:
 - Civil Service Staff (permanent, contract, and seconded public officers per §15(1) and §15(2))
 - Director-General (Presidential appointment per §11)
 - Registrar (Council appointment per §13)
 - Board Members (Presidential appointment per §4, including chairperson)
 - National Bar Examination Committee (NBEC) Members (Chief Justice appointment per §65)
 - Legal Education Appeals Tribunal Members (Board appointment per §80)
 - Inspectors (engaged per §35 to inspect accredited institutions)
 - Consultants/Advisers (engaged per §15(3) on recommendation of the Board)
 - Contractors (engaged for specific works or services)
- Each track is identified by a Track Type field on the person record; the track type determines which module workflows (onboarding, contract, leave, payroll, performance, exit) are available and required for that person.
- A person may hold records in more than one track simultaneously (e.g., a Board member who is also employed as civil service staff) with each track record managed independently.

Validation

- A person record must have exactly one Track Type assigned at creation; additional track records are created separately and cross-referenced.
- Track Type is a system-configurable reference value; new tracks can be added by an Administrator without code deployment.

Workflow

- HR Officer creates a new person record → selects Track Type → track-specific fields, workflows, and contract templates become available → record created within that track.

Error States

- Missing Track Type — "A personnel track must be selected before this record can be created."

Acceptance Criteria

- Given an HR Officer creates a record for a Board Member, when the track type is selected, then only Board Member-specific fields and workflows are presented.

- Given a person holds both a civil service staff record and a Board member record, when each record is viewed, then they are independent and cross-referenced, not merged.

SRS-HRM-APT-02: Manage Director-General Appointment and Contract

User Story

As an HR Officer, I want to record and manage the DG's Presidential appointment, terms, and exit, so that the DG's employment lifecycle is formally tracked in the HRM consistent with §11 of Act 1170.

Requirements

- DG record is created under the Director-General track on receipt of a Presidential appointment letter, recording: appointing authority (President), date of appointment, terms and conditions per the letter of appointment, and expected end date (where specified).
- The DG is also a member of the Board by virtue of office (§4(1)(h)); the system automatically cross-references the DG's staff record to the Board member register without requiring a separate manual Board member record.
- Onboarding workflow for the DG is triggered on record activation: IAM account provisioning, system access aligned to the DG role, protocol-level onboarding checklist (office setup, staff introductions, Board orientation).
- Exit workflow is triggered on end of tenure, resignation, or revocation: clearance sign-offs, access revocation, final documentation per the letter of appointment.
- The DG record is visible in the executive-level org chart as the apex of CLET's administrative structure.

Validation

- A DG record cannot be activated without an uploaded Presidential appointment letter.
- Only one DG record can be in Active status at any time.

Workflow

- Presidential appointment received → HR creates DG record under Director-General track → appointment letter uploaded → record activated → onboarding triggered → Active → end of tenure/resignation/revocation → exit triggered → status → "Former DG".

Error States

- Missing Appointment Letter — "The DG record cannot be activated without an uploaded Presidential appointment letter."
- Duplicate Active DG — "There is already an active Director-General record. End the existing record before activating a new one."

Acceptance Criteria

- Given a Presidential appointment letter is uploaded and the DG record is activated, when activation is confirmed, then the DG onboarding checklist is triggered and the DG's IAM account is provisioned.
- Given the DG record is activated, when the Board member register is viewed, then the DG is automatically listed as a Board member by virtue of office without a separate manual entry.

SRS-HRM-APT-03: Manage Registrar Appointment and Contract

User Story

As an HR Officer, I want to record and manage the Registrar's appointment, terms, and exit, so that the Registrar's employment lifecycle is formally tracked consistent with §13 of Act 1170.

Requirements

- Registrar record is created under the Civil Service Staff track (senior appointment) on Council appointment, recording: appointment authority (Council), date of appointment, and terms and conditions per the letter of appointment.
- Onboarding workflow triggered on record activation: IAM provisioning, system access aligned to the Registrar role, onboarding checklist.
- Exit workflow triggered on end of tenure, resignation, or other cessation: clearance, access revocation, final documentation.

Validation

- A Registrar record cannot be activated without an uploaded appointment letter.
- Only one Registrar record can be in Active status at any time.

Workflow

- Council appointment made → HR creates Registrar record → appointment letter uploaded → record activated → onboarding triggered → Active → exit triggered on cessation → status → "Former Registrar".

Error States

- Missing Appointment Letter — "The Registrar record cannot be activated without an uploaded Council appointment letter."

Acceptance Criteria

- Given the Registrar record is activated, when activation is confirmed, then the Registrar onboarding checklist and IAM provisioning are triggered.

SRS-HRM-APT-04: Manage Board Member Appointments, Tenure, and Exit

User Story

As an HR Officer, I want to record, track, and manage the full lifecycle of each Board member's appointment, tenure, term renewal, and exit, so that CLET remains compliant with the tenure and cessation rules in §§4 and 6 of Act 1170.

Requirements

- Board member records are maintained under the Board Member track, capturing: full name, appointing authority (President via §4(2)), nominating body (per §4(1)(a)–(h)), appointment date, term start date, term end date (4-year term per §6(1)), renewal flag (eligible for one further term only), meeting attendance record, and status (Nominated, Active, Resigned, Revoked, Expired, Vacancy-Pending).
- The Board composition as mandated by §4(1) is configurable: Chairperson (retired Justice/qualifying person, nominated by President), Judiciary representatives (3, per Chief Justice), Attorney-General representative (1), Bar representatives (3, at least one ≤7 years standing), Ministry of Education representative (1), GTEC representative (1), Conference of Law Deans representatives (3), and the Director-General (by virtue of office).

- Board members are paid allowances per §10; allowance type and amount are linked to the Compensation module under the Board member track and processed per applicable payment arrangements.
- Disclosure of interest records: HR can log a disclosed interest per §8(1), referencing the matter and the Board meeting; the system flags that the member is disqualified from deliberation on that matter.

Validation

- A Board member cannot be renewed for a third term; the renewal flag is system-enforced.
- A Board member who is absent from three consecutive meetings of the Board is automatically flagged for cessation review per §6(4); the system does not automatically cease the member but flags the condition for HR/DG action.

Workflow

- Appointment received → Board member record created → term start/end dates set → Active → 90-day expiry alert → renewal workflow or exit → Expired/Resigned/Revoked/Vacancy-Pending → vacancy filled for unexpired term per §6(7).

Error States

- Third Term Attempted — "This Board member has already served two terms and is not eligible for re-appointment under §6(1) of Act 1170."
- Missing Appointment Documentation — "A Board member record cannot be activated without documented Presidential appointment."

Acceptance Criteria

- Given a Board member has served two terms, when a renewal is attempted, then the system blocks it with the third-term ineligibility message.
- Given a Board member is absent from three consecutive meetings, when the third absence is recorded, then the system flags the record for HR/DG cessation review.
- Given a Board member discloses an interest per §8(1), when the disclosure is recorded, then the member's status for that meeting item is marked as disqualified from deliberation.

SRS-HRM-APT-05: Manage NBEC Member Appointments, Tenure, and Exit

User Story

As an HR Officer, I want to record and manage the full lifecycle of each NBEC member's appointment, so that CLET meets the tenure and cessation requirements of §§65 and 67 of Act 1170.

Requirements

- NBEC member records are maintained under the NBEC Member track, capturing: full name, appointing authority (Chief Justice per §65(2) for chairperson; per §65(1)(a)–(d) for members), nominating body, term start date, term end date (4-year term per §67(1)), renewal flag (eligible for one further term only per §67(1)), meeting attendance record, and status (Active, Resigned, Revoked, Expired, Vacancy-Pending).
- NBEC composition per §65(1): 2 Board-nominated members, 3 judges with academic background (Chief Justice), 3 Bar members in good standing with academic background

(Bar), and 3 academia members (Conference of Law Deans); chairperson appointed by Chief Justice per §65(2) — law lecturer of ≥10 years.

- NBEC members are subject to disclosure of interest (§66(2) applies §8) and allowance rules (§66(2) applies §10); handled within the NBEC track using the same disclosure and compensation mechanisms as Board members.
- Absence rule per §67(3): a member absent from three or more consecutive meetings without sufficient cause ceases to be a member; the system flags this condition for the Chief Justice notification workflow.

Validation

- NBEC member cannot be renewed for a third term; the renewal flag is system-enforced.
- A member absent from three or more consecutive NBEC meetings without sufficient cause is flagged for cessation per §67(3).

Workflow

- Chief Justice appointment received → NBEC member record created → term dates set → Active → 90-day expiry alert → renewal or exit → vacancy notification to Chief Justice per §67(6).

Error States

- Third Term Attempted — "This NBEC member has already served two terms and is not eligible for re-appointment under §67(1) of Act 1170."

Acceptance Criteria

- Given an NBEC member's term end date is 90 days away, when the daily check runs, then an alert is sent to HR and the DG.
- Given an NBEC member is absent from three consecutive meetings, when the third absence is recorded, then the system flags the record for cessation and prompts notification to the Chief Justice.

SRS-HRM-APT-06: Manage Tribunal Member Appointments and Ad Hoc Lifecycle

User Story

As an HR Officer, I want to record the appointment and administrative lifecycle of Legal Education Appeals Tribunal members, so that CLET can manage their onboarding, allowances, and exit per §§79–82 of Act 1170.

Requirements

- Tribunal member records are maintained under the Tribunal Member track, capturing: full name, appointing authority (Board per §80(2)), role (chairperson or member), qualifications (≥10 years' legal education experience for chairperson per §80(1)(a); ≥5 years for members per §80(1)(b)), appointment date, and status (Appointed, Active-on-Panel, Inactive, Exited).
- The Tribunal is constituted on an ad hoc basis per §79(2) — a member's status moves to Active-on-Panel when a specific appeal panel is constituted, and returns to Inactive when that panel concludes.
- Tribunal Registrar (appointed by the Board per §81(1)(a)) and Tribunal support staff (per §81(1)(b)) are recorded under the Civil Service Staff track with a Tribunal-unit assignment.

- Tribunal expenses are a charge on CLET funds per §82; allowance payments for Tribunal panel sittings are processed via the Compensation module and linked to the specific panel constituted.
- Disclosure of interest and allowance rules apply per §80(3), which applies §§8 and 10.

Validation

- A Tribunal member record cannot be activated without documented Board appointment.
- Allowance payments for a Tribunal sitting are linked to the specific panel record, not processed as standing monthly payments.

Workflow

- Board appointment made → Tribunal member record created → Inactive → appeal lodged → panel constituted → member status → Active-on-Panel → panel concludes → member status → Inactive (or Exited on full cessation).

Error States

- Missing Board Appointment — "A Tribunal member record cannot be activated without documented Board appointment."

Acceptance Criteria

- Given a Tribunal panel is constituted for a specific appeal, when the panel is recorded, then the relevant Tribunal members' status changes to Active-on-Panel and their allowance for the sitting can be processed.
- Given a panel concludes, when the outcome is recorded, then the members' status reverts to Inactive until the next panel constitution.

SRS-HRM-APT-07: Issue Statutory Tenure Expiry Alerts

User Story

As an HR Officer, I want automated alerts generated 90 days and 30 days before the end of a Board or NBEC member's term, so that renewal or succession workflows are initiated in time and no term lapses without action.

Requirements

- The system runs a daily check against the term end dates of all Active Board members and Active NBEC members.
- 90-day alert: sent to DG and the relevant Board Chair / Chief Justice (as applicable) notifying that the member's term expires in 90 days and prompting a renewal eligibility check or succession action.
- 30-day alert: a follow-up alert sent if no renewal or succession action has been recorded against the member's record.
- Alert delivery via the Communications module — in-app notification and email.
- On term expiry with no renewal or replacement record, the member's status is automatically changed to Expired and a vacancy record is created for administrative follow-up.

Validation

- Alerts must reference the specific member, their track (Board or NBEC), their term end date, their renewal eligibility status, and the action required.

Workflow

- Daily check → term end date within 90 days → 90-day alert sent → no action recorded → term end date within 30 days → 30-day alert sent → term expires → status → Expired, vacancy record created.

Error States

- Alert Delivery Failure — "Tenure expiry alert for [member name] could not be delivered. Retry has been queued."

Acceptance Criteria

- Given a Board member's term end date is exactly 90 days away, when the daily check runs, then an alert is sent to the DG and Board Chair.
- Given no renewal or succession action is recorded after the 90-day alert, when the 30-day threshold is reached, then a follow-up alert is sent.
- Given a term expires with no action, when the expiry date passes, then the member's status changes to Expired and a vacancy record is created automatically.

MODULE: Consultant & Contractor Management

SRS-HRM-CON-01: Register and Onboard Engaged Consultant

User Story

As an HR Officer, I want to register engaged consultants and advisers in the HRM, so that their engagement details, scope of work, and deliverables are formally tracked as a distinct track alongside staff records.

Requirements

- Consultants and advisers engaged per §15(3) of Act 1170 (on recommendation of the Board) are recorded under the Consultant track, capturing: full name, professional profile, engagement terms (start date, end date or duration, fees/rate), scope of work, recommending Board resolution reference, DG sign-off, and contract document (linked to or stored alongside the Governance Portal per System 11 where applicable).
- On engagement confirmation, an onboarding checklist specific to consultants is triggered: IAM account provisioning for system access, inclusion in the relevant communication groups, and where applicable, building access badge.
- Contractors (engaged for specific works or services not falling under the consultant/adviser definition) are recorded under the Contractor track with the same core fields but with additional fields for: contracting entity, contract value, payment schedule, and works-completion sign-off.

Validation

- A consultant record cannot be activated without a Board recommendation reference and DG sign-off.
- A contractor record cannot be activated without an uploaded executed contract.

Workflow

- Board recommends engagement → HR creates consultant record → Board resolution reference and DG sign-off recorded → contract uploaded → record activated → onboarding checklist triggered.

Error States

- Missing Board Recommendation — "A consultant record cannot be activated without a Board recommendation reference."
- Missing DG Sign-Off — "A consultant record cannot be activated without DG sign-off."
- Missing Executed Contract — "A contractor record cannot be activated without an uploaded executed contract."

Acceptance Criteria

- Given a consultant record is activated with Board recommendation and DG sign-off, when activation is confirmed, then the consultant onboarding checklist and IAM provisioning are triggered.

SRS-HRM-CON-02: Track Consultant Deliverables and Trigger Payment

User Story

As an HR Officer, I want to track deliverables against each consultant engagement and ensure payment is only triggered on DG-confirmed delivery, so that CLET's consultant payments are controlled and auditable per HRM-F06.

Requirements

- Each consultant record supports one or more deliverable entries: deliverable description, due date, submission date, submission evidence (document upload), and delivery status (Pending, Submitted, DG-Confirmed, Rejected).
- Payment for a deliverable is triggered only when the DG explicitly confirms delivery (status → DG-Confirmed); confirmation is recorded with DG identity, timestamp, and is immutable.
- On DG confirmation, a payment trigger event is raised and forwarded to the Financial Management System (System 13) and Payment System (System 20) via the platform's webhook mechanism.
- A consultant whose deliverable is Rejected receives a formal rejection notice via the Communications module, with the rejection reason recorded on the deliverable record.

Validation

- Payment cannot be triggered for a deliverable that has not reached DG-Confirmed status; this is system-enforced and cannot be bypassed.

Workflow

- Consultant submits deliverable evidence → HR records submission → DG reviews → DG Confirms (payment trigger raised) or Rejects (rejection notice sent) → Confirmed deliverables are included in the payment batch to Financial Management System (System 13)/ Payment System (System 20).

Error States

- Unauthorized Payment Trigger — "Payment cannot be triggered for this deliverable until the DG has confirmed delivery."
- Missing Submission Evidence — "A deliverable cannot be submitted without supporting evidence."

Acceptance Criteria

- Given a DG confirms a deliverable, when confirmation is recorded, then a payment trigger event is raised and forwarded to Financial Management System (System 13) and Payment System (System 20) via webhook.
- Given a deliverable has not been DG-confirmed, when a payment trigger is attempted, then the system blocks it.

SRS-HRM-CON-03: Manage Consultant Exit and Contract Closure

User Story

As an HR Officer, I want to formally close a consultant engagement on completion, expiry, or early termination, so that system access is revoked and all outstanding deliverables are resolved before the engagement is closed.

Requirements

- On reaching the contract end date or on recording an early termination, the system triggers a consultant exit workflow: outstanding deliverables flagged for resolution, IAM account deactivated, building access revoked, and final payment status confirmed.
- An engagement cannot be fully closed while any deliverable remains in Pending or Submitted status without an explicit override by HR with a recorded reason.

Validation

- Engagement cannot be closed with unresolved deliverables (Pending or Submitted) without an HR override and recorded reason.

Workflow

- Contract end date reached or early termination recorded → outstanding deliverables flagged → HR resolves or records override → IAM deactivation triggered → status → Closed.

Error States

- Unresolved Deliverables — "This engagement cannot be closed while deliverables are in Pending or Submitted status."

Acceptance Criteria

- Given a consultant engagement reaches its end date with an unresolved deliverable, when closure is attempted, then the system blocks it and lists the outstanding deliverables.
- Given all deliverables are resolved, when the engagement is closed, then the IAM account is deactivated and all access is revoked.

MODULE: Inspector Management

SRS-HRM-INS-01: Register and Manage Inspectors

User Story

As an HR Officer, I want to record and manage persons engaged as inspectors of accredited institutions per §35 of Act 1170, so that their engagement terms, assignments, and exit are tracked within the HRM.

Requirements

- Inspectors are recorded under the Inspector track, capturing: full name, professional qualifications, engagement terms (date, duration, fees/rate), and status (Active, Inactive, Exited).
- Each inspector assignment links to a specific inspection event (accredited institution, inspection date, scope); the Inspector record references the Accreditation System inspection record for full inspection detail rather than duplicating it.
- On engagement, an inspector onboarding checklist is triggered: IAM provisioning for system access, and relevant communication group inclusion.
- On end of engagement, exit workflow triggered: IAM deactivation, access revocation.

Validation

- An inspector record cannot be activated without an engagement letter or equivalent appointment documentation.

Workflow

- Engagement confirmed → Inspector record created → activation → onboarding triggered → inspector assigned to inspections via the Accreditation System → engagement ends → exit triggered → Exited.

Error States

- Missing Engagement Documentation — "An Inspector record cannot be activated without engagement documentation."

Acceptance Criteria

- Given an inspector record is activated, when activation is confirmed, then the inspector onboarding checklist and IAM provisioning are triggered.
- Given an inspector's engagement ends, when the end date is reached, then the exit workflow is triggered and the IAM account is deactivated.

MODULE: External System API — Governance Portal, Tribunal, NBEC & Accreditation System

SRS-HRM-EXT-01: Expose Member and User Data to the Governance Portal (System 11)

User Story

As a DTI Engineer, I want the HRM to expose Board member and NBEC member data to the Governance Portal (System 11) via a secure API, so that the Governance Portal always reflects current, authoritative membership data without manual re-entry.

Requirements

- The HRM exposes a dedicated, authenticated REST API endpoint for System 11 (Governance Portal) to query current Board members and NBEC members: GET /members?track={board|nbec}&status={active} returning each member's name, track, nominating body, term start/end dates, renewal eligibility, and status.
- In addition to on-demand query, the HRM publishes lifecycle event webhooks (per SRS-HRM-INTG-01) for the Governance Portal subscription, including: member.appointed, member.renewed, member.resigned, member.revoked, member.expired, member.vacancy-created — each carrying the member's full record payload.
- The Governance Portal can additionally query a member's disclosure-of-interest records: GET /members/{id}/disclosures.
- Access is authenticated via a system-to-system API key; the Governance Portal's API key is scoped to read-only access on the Board and NBEC member endpoints only.

Validation

- The API must never expose salary, health, or grievance/disciplinary data for Board or NBEC members; field-level scoping is enforced at the API layer.
- All API access is logged.

Workflow

- Governance Portal calls GET /members endpoint or receives a webhook event → uses the data to update its own member register → any discrepancy between the Governance Portal and HRM is resolved by re-querying the HRM as the authoritative source.

Error States

- Unauthorized API Request — "A valid system-to-system API key scoped to the Governance Portal is required."
- Invalid Query Parameter — "The 'track' parameter must be 'board' or 'nbec'."

Acceptance Criteria

- Given a Board member is appointed in the HRM, when the appointment is recorded, then a member.appointed webhook is fired to the Governance Portal within seconds.
- Given the Governance Portal queries GET /members?track=board&status=active, when the response is returned, then it contains only currently active Board members with no salary, health, or compliance data.

SRS-HRM-EXT-02: Expose Tribunal Member Data to the Tribunal System

User Story

As a DTI Engineer, I want the HRM to expose Tribunal member data to the Tribunal System via a secure API, so that the Tribunal System knows who is currently appointed and active on a panel without manual re-entry.

Requirements

- The HRM exposes an authenticated REST API endpoint for the Tribunal System to query Tribunal members: GET /members?track=tribunal&status={appointed|active-on-panel|inactive} returning each member's name, role (chairperson or member), qualifications, appointment date, and current status.
- Lifecycle event webhooks are published for the Tribunal System subscription: member.panel-constituted, member.panel-concluded, member.appointed (Tribunal track), member.exited (Tribunal track).
- The Tribunal System can query a specific panel's composition: GET /panels/{panel-id}/members.

Validation

- Access is authenticated via a system-to-system API key scoped to read-only access on the Tribunal member and panel endpoints only.
- All API access is logged.

Workflow

- Tribunal System calls the member endpoint or receives a webhook → updates its own panel composition data → the HRM remains the authoritative source.

Error States

- Unauthorized API Request — "A valid system-to-system API key scoped to the Tribunal System is required."

Acceptance Criteria

- Given a Tribunal panel is constituted in the HRM, when the panel record is created, then a member.panel-constituted webhook is fired to the Tribunal System.
- Given the Tribunal System queries GET /members?track=tribunal, when the response is returned, then it contains all Tribunal members with their current status.

SRS-HRM-EXT-03: Expose NBEC Member Data to the NBEC System

User Story

As a DTI Engineer, I want the HRM to expose NBEC member data to the NBEC System via a secure API, so that the NBEC System's member register is always derived from the HRM without duplication.

Requirements

- The HRM exposes an authenticated REST API endpoint for the NBEC System to query NBEC members: GET /members?track=nbec&status={active|inactive|expired} returning each member's name, nominating body, academic background flag, term dates, attendance record, renewal eligibility, and status.

- Lifecycle event webhooks published for the NBEC System subscription: member.appointed (NBEC track), member.renewed, member.resigned, member.revoked, member.expired, member.vacancy-created — each for the NBEC track.
- The NBEC System can query a specific member's meeting attendance record: GET /members/{id}/attendance?track=nbec.

Validation

- Access is authenticated via a system-to-system API key scoped to read-only access on the NBEC member endpoints only.
- All API access is logged.

Workflow

- NBEC System calls the member endpoint or receives a webhook → updates its own member register → HRM remains the authoritative source.

Error States

- Unauthorized API Request — "A valid system-to-system API key scoped to the NBEC System is required."

Acceptance Criteria

- Given an NBEC member's status changes (e.g., from Active to Expired), when the change is recorded in the HRM, then the relevant lifecycle webhook is fired to the NBEC System within seconds.
- Given the NBEC System queries GET /members?track=nbec&status=active, when the response is returned, then it contains only currently active NBEC members.

SRS-HRM-EXT-04: Expose Accreditation Inspector Data to the NBEC System

User Story

As a DTI Engineer, I want the HRM to expose Accreditation Inspectors data to the Accreditation System via a secure API, so that the Accreditation System's member register is always derived from the HRM without duplication.

Requirements

- The HRM exposes an authenticated REST API endpoint for the Accreditation System to query Accreditation Inspectors: GET /members?track=inspector&status={active|inactive|expired} returning each inspector's name, nominating body, academic background flag, term dates, attendance record, renewal eligibility, and status.
- Lifecycle event webhooks published for the Accreditation System subscription: member.appointed (Inspector track), member.renewed, member.resigned, member.revoked, member.expired, member.vacancy-created — each for the Accreditation Inspector track.
- The Accreditation System can query a specific member's meeting attendance record: GET /members/{id}/attendance?track=inspector.

Validation

- Access is authenticated via a system-to-system API key scoped to read-only access on the Accreditation inspector endpoints only.

- All API access is logged.

Workflow

- Accreditation System calls the member endpoint or receives a webhook → updates its own member register → HRM remains the authoritative source.

Error States

- Unauthorized API Request — "A valid system-to-system API key scoped to the Accreditation System is required."

Acceptance Criteria

- Given an Accreditation inspector's status changes (e.g., from Active to Expired), when the change is recorded in the HRM, then the relevant lifecycle webhook is fired to the Accreditation System within seconds.
- Given the Accreditation System queries GET /members?track=inspector&status=active, when the response is returned, then it contains only currently active Accreditation inspectors.

MODULE: Data Subject Rights (Ghana Data Protection Act)

SRS-HRM-DSR-01: Handle Data Subject Access Requests

User Story

As a Data Protection Officer, I want the system to manage Data Subject Access Requests (DSARs) formally, so that CLET fulfils its obligations under the Ghana Data Protection Act 2012 (Act 843) within the statutory 30-day response period.

Requirements

- Any employee, Board/NBEC/Tribunal member, consultant, contractor, inspector, or former person associated with CLET can submit a DSAR via the ESS portal or HR email, requesting access to their personal data held in the HRM.
- DSAR submissions are tracked as a formal workflow: Received → Under Review → Data Compiled → Response Sent → Closed, with a mandatory response deadline of 30 calendar days from receipt.
- The system compiles the personal data held across all HRM modules for the data subject and presents it to the Data Protection Officer in a portable format (PDF or JSON) for review before dispatch.
- DSAR records and response documents are retained separately from the main employee record, with access restricted to the Data Protection Officer and HR Manager.
- A DSAR cannot be closed without a recorded response date and evidence of dispatch.

Validation

- The system must flag any DSAR that has been Under Review for more than 20 calendar days without a response, escalating to the HR Manager as a statutory deadline risk.
- Data compiled for a DSAR must exclude data relating to third parties (e.g., other employees named in grievance records) where disclosure would breach those third parties' data rights; the Data Protection Officer must review and redact before dispatch.

Workflow

- DSAR received → logged with receipt date → 30-day deadline set automatically → data compiled across all modules → Data Protection Officer reviews and redacts as needed → response dispatched → DSAR Closed.

Error States

- DSAR Deadline Risk — "This DSAR has been open for 20 days without a response. Statutory deadline is 30 days from receipt."
- Missing Response Evidence — "This DSAR cannot be closed without a recorded response date and evidence of dispatch."

Acceptance Criteria

- Given a DSAR is received, when it is logged, then the 30-day response deadline is automatically calculated and displayed.
- Given a DSAR has been open for 20 days without a response, when the daily check runs, then the system escalates to the HR Manager with a statutory deadline risk alert.
- Given the Data Protection Officer compiles personal data for a DSAR, when the compiled data is previewed, then it covers all HRM modules holding data on that individual, presented in a portable format.

MODULE: Gamification & Staff Engagement

SRS-HRM-GAM-01: Configure Gamification Challenges and Categories

User Story

As an HR Manager, I want to create and configure gamification challenges with defined categories, rules, eligibility, and prizes, so that staff engagement activities are structured, fair, and fully managed within the platform.

Requirements

- HR Manager can create gamification challenges specifying: challenge title, description, category (e.g., "Best Dressed Staff", "Paired Staff Gift", "Employee of the Month", "Attendance Star", "Learning Champion", etc), participation scope (all staff, a directorate, an org unit, or a custom group), nomination/voting window (open date and close date), voting rules (whether participants can nominate only, vote only, or both), eligibility criteria (e.g., minimum months of service, grade level), prize or gift description, and status (Draft, Active, Closed, Archived).
- Challenge categories are configurable by the HR Manager; examples include social (peer-voted fun challenges such as "Best Dressed"), performance-linked (e.g., "Learning Champion" based on CPD hours), and paired/team (e.g., "Paired Staff Gift" where participants are randomly or deliberately paired with a colleague for a recognition gift).
- A challenge can have one or more rounds (e.g., a monthly cycle within an annual programme).

Validation

- A challenge cannot be Published/Active without a defined voting window, participation scope, and prize description.
- A challenge's close date must be later than its open date.

Workflow

- HR Manager creates challenge (Draft) → configures rules, scope, prize → publishes (Active) → voting/nomination window runs → window closes → winners determined → results announced → challenge Closed/Archived.

Error States

- Incomplete Challenge Definition — "A challenge cannot be published without a defined voting window, participation scope, and prize description."
- Invalid Window Dates — "The challenge close date must be later than the open date."

Acceptance Criteria

- Given an HR Manager creates a challenge without a prize description, when they attempt to publish it, then the system blocks publication.
- Given a challenge is published, when it becomes Active, then eligible employees can see it in their ESS portal gamification section.

SRS-HRM-GAM-02: Nominate and Vote in a Challenge

User Story

As an Employee, I want to nominate colleagues and cast votes in active challenges, so that I can participate in staff recognition activities in a fun, transparent way.

Requirements

- Eligible employees can view all currently Active challenges in their ESS portal gamification section.
- For nomination-type challenges (e.g., "Best Dressed Staff"): employees can nominate any eligible colleague by name, with an optional brief reason; nominations are visible in aggregate (nominee names and nomination count) but individual nominators' identities are not revealed to other employees (visible only to HR Manager).
- For voting-type challenges: after nominations close, employees cast one vote per challenge round from the shortlist of nominees; employees cannot see how others have voted until the window closes.
- For paired challenges (e.g., "Paired Staff Gift"): HR Manager either manually pairs participants or triggers an automatic random-pairing; paired employees are notified of their partner and the gift or recognition activity associated with the pairing.
- An employee cannot nominate or vote for themselves in any challenge category.
- An employee can change their nomination or vote while the voting window is open; only the last-submitted selection counts.

Validation

- Self-nomination and self-voting are blocked system-wide across all challenge categories.
- An employee can cast only one vote per challenge round; attempting a second vote replaces the first.
- Participation is restricted to employees within the challenge's configured eligibility criteria and participation scope.

Workflow

- Challenge window opens → eligible employees notified via the Communications module → employees nominate and/or vote → window closes → nominations/votes locked → winner determination triggered.

Error States

- Self-Nomination Blocked — "You cannot nominate yourself for this challenge."
- Self-Vote Blocked — "You cannot vote for yourself in this challenge."
- Outside Eligibility Scope — "You are not eligible to participate in this challenge."
- Voting Window Closed — "The voting window for this challenge is closed."

Acceptance Criteria

- Given an employee attempts to nominate themselves, when they submit, then the system blocks the nomination.
- Given an employee submits a vote and then changes it before the window closes, when the window closes, then only their last-submitted vote is counted.
- Given a paired challenge is triggered, when pairing is complete, then each participant receives an in-app notification identifying their partner and the associated gift/activity.

SRS-HRM-GAM-03: Determine Winners and Prizes

User Story

As an HR Manager, I want winners determined automatically or confirmed manually after the voting window closes, so that results are objective, auditable, and fairly awarded.

Requirements

- On window close, the system calculates results: for voted challenges, the nominee with the most votes wins (ties broken by earliest nomination date or by HR Manager override); for paired challenges, all participants are winners.
- For challenges with configurable scoring (e.g., "Learning Champion" based on CPD hours data), the system automatically ranks eligible participants by the relevant metric and presents the ranked list to the HR Manager for review and confirmation before announcement.
- HR Manager reviews the computed result, confirms or adjusts (with a recorded reason for any adjustment), and marks the challenge as Winners Confirmed before the announcement is triggered.
- Each winner's record includes: challenge title, round, date, prize received, and confirming HR Manager — visible on the employee's profile under a Recognition & Achievements section.

Validation

- An adjustment to a computed result requires a mandatory written reason recorded by the HR Manager.
- Results cannot be published until the HR Manager confirms them.

Workflow

- Voting window closes → system computes results → HR Manager reviews → HR Manager confirms (or adjusts with reason) → Winners Confirmed → announcement triggered.

Error States

- Unconfirmed Results — "Challenge results cannot be announced until the HR Manager has confirmed the winners."

Acceptance Criteria

- Given the voting window closes, when results are computed, then the system presents a ranked nominee list to the HR Manager before any public announcement.
- Given the HR Manager adjusts a computed result, when the adjustment is saved, then a mandatory reason is recorded and the audit trail reflects both the computed and adjusted outcome.
- Given a winner is confirmed, when the result is saved, then it appears on the winner's employee profile under Recognition & Achievements.

SRS-HRM-GAM-04: Announce Winners and Track Engagement

User Story

As an HR Manager, I want winners announced automatically and staff engagement with gamification tracked over time, so that recognition reaches everyone and the programme's impact can be measured.

Requirements

- On HR Manager confirmation of winners, the system automatically sends an announcement via the Communications module to the relevant participation scope (all staff, a directorate, etc.) naming the winner(s), the challenge, and the prize.
- Employees can view past challenge results and their own Recognition & Achievements history in the ESS portal.
- HR Manager has access to a Gamification Engagement Dashboard showing: number of active and completed challenges, participation rate per challenge (nominees as % of eligible employees, voters as % of eligible employees), most nominated employees, challenge history, and prize fulfilment status (whether the prize for each winner has been delivered, recorded by HR).
- Prize fulfilment is tracked per winner: HR Manager marks a prize as Delivered once it has been given, and the winner receives an in-app confirmation.

Validation

- An announcement cannot be sent before the HR Manager has confirmed the winners.
- Prize fulfilment status must be updated by HR; it cannot be self-reported by the winner.

Workflow

- Winners Confirmed → announcement automatically sent → employees view results → HR Manager tracks prize fulfilment → prize marked Delivered → winner notified → challenge Closed.

Error States

- Premature Announcement Blocked — "The announcement cannot be sent until the HR Manager has confirmed the winners."
- (Prize Delivery tracked as a status, not a blocking error — unfulfilled prizes appear as open items on the HR Manager's Gamification Dashboard.)

Acceptance Criteria

- Given winners are confirmed, when confirmation is saved, then the announcement is automatically sent to the participation scope via the Communications module.
- Given an HR Manager views the Gamification Dashboard, when it loads, then it shows participation rates, challenge history, and open prize fulfilment items for all challenges within their scope.
- Given a prize is marked Delivered, when the delivery is recorded, then the winner receives an in-app notification confirming receipt.

21. Data Requirements

21.1 Key Entities and Relationships

The HRM data model centres on the Employee entity as the single, authoritative reference used by every module. Key entities and relationships include:

Entity	Related Entities	Relationship
Employee	Org Unit, Position	Many employees to one position, up to the position's configured headcount budget (exactly one assignment per employee flagged substantive); one org unit to many positions
Employee	Dependant	One employee to many dependants
Employee	Job History entry	One employee to many chronological job history entries
Employee	Qualification	One employee to many educational qualifications
Employee	Leave Request / Ledger	One employee to many leave requests; one running ledger per leave type
Employee	Payroll Run line item	One employee to many payroll run line items (one per run)
Employee	Appraisal Goal / Key Result	One employee to many goals; one goal to many key results
Employee	Grievance / Disciplinary Case	One employee to many cases (as subject or filer)
Applicant	Employee	Zero or one applicant converts to exactly one employee (on hire)
Vacancy	Applicant	One vacancy to many applicants
Promotion Case / Transfer Case	Employee, Position	Many cases to one employee; references current and proposed position
Employee	Leave Type, Overtime Multiplier	Centrally configured, referenced by many leave/payroll calculations

22. External Interface Requirements

External System	Interface Type	Direction	Purpose
IAM System	SCIM 2.0 REST	Outbound	User account provisioning, update, and deactivation on employee/member hire/update/termination — all personnel tracks
Biometric & Card Devices (ZKTeco, Suprema)	HTTP POST	Inbound	Clock-in/clock-out attendance events
Governance Portal (S011)	REST API / Webhook	Outbound + Inbound	Board member/Registrar records, consultant register; member API endpoints and lifecycle webhooks; engagement contract storage referenced read-only from HRM
Financial Management System (S013)	REST API / Batch File	Outbound	Payroll disbursement batches; consultant deliverable payment triggers
Payment System (S020)	REST API	Outbound	Board/NBEC/Tribunal allowance payments; consultant fee payments on DG-confirmed delivery
NBEC System	REST API / Webhook	Outbound	NBEC member records; member API endpoints and lifecycle webhooks
Tribunal System	REST API / Webhook	Outbound	Tribunal member records per sitting; member API endpoints and lifecycle webhooks
Accreditation System	REST API / Webhook	Outbound	Accreditation inspector records; member API endpoints and lifecycle webhooks
Unified Portal (S016)	REST API	Outbound	Publishing applicable static reference content
Speak Up	REST API	Outbound	Ethics referral of Speak-Up reports
Subscribing CLET Systems	Signed Webhooks (HMAC-SHA256)	Outbound	Lifecycle event notifications including Board/NBEC/Tribunal appointments and exits, hire, termination, leave approval, payroll events
Audit & Logging System (S022)	REST API	Outbound	Compliance page-view and action logs
GRA / SSNIT	File export (filing-ready format)	Outbound	Statutory PAYE and SSNIT returns, Annual Employee Tax Deduction forms
Governance Portal (System 11)	REST API + Webhooks (HMAC-SHA256)	Outbound	Board and NBEC member data — on-demand query and lifecycle event webhooks

External System	Interface Type	Direction	Purpose
Financial Management System (System 13)	REST API / GHIPSS File	Outbound	GHIPSS-compatible payroll export; consultant deliverable payment triggers
Payment System (System 20)	REST API / File	Outbound	Allowance payments for Board, NBEC, Tribunal members; consultant payment triggers
Tribunal System	REST API + Webhooks (HMAC-SHA256)	Outbound	Tribunal member and panel data — on-demand query and lifecycle event webhooks
NBEC System	REST API + Webhooks (HMAC-SHA256)	Outbound	NBEC member data — on-demand query and lifecycle event webhooks
Accreditation System	REST API + Webhooks (HMAC-SHA256)	Outbound	Accreditation inspector data — on-demand query and lifecycle event webhooks

23. Non-Functional Requirements

23.1 Security

- All authentication, MFA, login, logout, and password functions are delegated entirely to the IAM System; the HRM system implements none of these directly.
- Sensitive data (compliance case detail, health records, welfare request detail) is encrypted at rest (AES-256), with quarterly key rotation.
- PostgreSQL Row-Level Security is enabled on grievance, disciplinary, speak-up, and health record tables.
- All system-to-system integrations (SCIM, webhooks, REST APIs) require dedicated, rotated authentication tokens, never end-user credentials.

23.2 Performance and Scalability

- Payroll computation for the full CLET workforce must complete within an operationally acceptable window during a single payroll run.
- Attendance clock events from biometric/card devices must be ingested and matched to an employee record within seconds of receipt.
- Webhook delivery to subscribing systems is attempted within seconds of the triggering event, with retries on a defined exponential backoff schedule.

23.3 Availability and Reliability

- The ESS portal and core HR modules should target high availability consistent with CLET's operational needs, given daily employee reliance on leave, attendance, and payslip access.
- Failed SCIM and webhook deliveries are automatically retried and escalated for manual intervention after repeated failures.

23.4 Usability and Accessibility

- The Employee Self-Service portal follows a single, consistent design system across all modules it consolidates.
- Interfaces are usable on standard desktop and mobile browsers without requiring specialised software.

23.5 Audit, Logging and Traceability

- A single, shared audit-logging mechanism captures actor, timestamp, action, and before/after values for every change across all modules.
- Critical lifecycle and payroll events are recorded as immutable, append-only stored events, reconstructable for the Auditor-General.

23.6 Data Retention and Privacy

- The system complies with the Ghana Data Protection Act 2012 (Act 843): lawful basis, data minimisation, purpose limitation, accuracy, storage limitation, integrity, confidentiality, and data subject rights.

- DEI and compliance aggregate reporting suppresses any group smaller than 3 to protect individual privacy.
- Anonymous Speak-Up submissions store no identifying information unless the reporter explicitly opts in.

23.7 Localisation

- All monetary values are computed and displayed in Ghana Cedis (GHS).
- Statutory configuration (SSNIT rates, PAYE bands, Labour Act leave minimums) reflects current Ghanaian legislation and is updatable without code deployment as legislation changes.

Appendix A: Glossary

Term	Definition
CLET	Council for Legal Education and Training — the regulatory body for legal education and training in Ghana.
ESS	Employee Self-Service — the consolidated post-login portal through which employees access all self-service HR capabilities.
IAM	Identity and Access Management System — handles login, MFA, logout, change-password, and forgotten-password for all CLET systems.
SCIM	System for Cross-domain Identity Management — the protocol used by the HRM system to provision/deprovision IAM user accounts.
OKR	Objectives and Key Results — the goal-setting framework used in the performance appraisal cycle.
Segregation of Duties	A control requiring that the person who computes a payroll run cannot be the same person who approves it.
RLS	Row-Level Security — a database-level access control restricting which rows a user can query.
Webhook	A signed HTTP callback used to notify subscribing CLET systems of HRM lifecycle events in real time.
